1936/37-1937/38

LETTER OF TRANSMITTAL

STATE OF NORTH CAROLINA
SUPERINTENDENT OF PUBLIC INSTRUCTION
RALEIGH

To His Excellency, Governor Clyde R. Hoey
and

To the Members of the General Assembly of 1939:

In compliance with the law I am submitting my Report as State Superintendent of Public Instruction for the biennium ending June 30, 1938.

This Report, as you will note, deviates from the general make-up and appearance of former reports on the school situation in that it gives a large number of illustrations. These pictures are presented in order that you and others who make use of it may get a better idea of the school situation as it is today.

Tables of figures on the various aspects of the public school system are also shown, and from these one may ascertain the growth of this great institution, the public schools, since 1930. In order that you may better visualize this improvement, a few charts are given along with the tables.

I believe you will be pleased with the progress that has been made during the years indicated. Personally, I think we have laid the foundation for a good school system; and as the years go by, I have confidence that greater improvement will be made. In the first section of this report I am suggesting certain lines along which I believe this development should follow for the next biennium. I hope you will give these recommendations your careful consideration.

Respectfully submitted,

State Superintendent of Public Instruction

Recommendations

BRIEF REVIEW

Before making by recommendations concerning the operation of the public schools of the State for the next biennium, I wish, in order that everyone may get a general view of the matter, to review very briefly the situation with reference to the public schools beginning October 24, 1934, when I became State Superintendent of Public Instruction as successor to the late Dr. A. T. Allen.

A majority of you will recall, I am sure, the period through which we had just passed, the dark days of the depression when agriculture, commerce and industry were almost at a standstill. You will also recall that just prior to the convening of the General Assembly of 1935 economic conditions were beginning to improve.

The General Assembly of 1933 had provided a fund of \$16,000,000. With this State fund plus revenues from fines, forfeitures, penalties and poll taxes amounting to \$2,296,364 the schools were to be operated for an eight months term. The total funds available for the year (1933-34) represented a decrease of \$5,167,951 in the amount expended the preceding year (1932-33). A more extended account of this situation will be found in Part I of the Superintendent's Report for the biennium 1932-34. Suffice it to say here that the schoolhouse doors were kept open and teachers' salaries, although very much lower than formerly, were paid promptly and in full. Financial support of a minimum State program of public education had proven to be sound, but it was recognized that the appropriation of \$16,000,000 made in the beginning was too little to operate a satisfactory school system.

As stated above, however, the economic conditions of the State had greatly improved when the General Assembly of 1935 met, and so the State appropriation for schools was raised to \$20,031,000 for the school year 1935-36 and to \$20,900,000 for the year 1936-37. With these increased funds the salaries of all teachers were raised for the first year of the biennium twenty per cent and for the second year twenty-five per cent over what was paid in 1934-35. There was a corresponding increase made in other expenses of operating the public schools.

When the law-making body of 1937 came upon the scene, business had improved still further. Emphasis in the field of education had shifted from keeping schoolhouse doors open and paying teachers salaries to the expansion of the public school system—to making it more nearly fit the needs of the children as the future citizens of the State. There was an atmosphere of hope and desire, and willingness on the part of the people to broaden the school opportunity offered the youth of this State. There was a very evident demand in many parts of the State for an enrichment of the public school program.

In my endeavor to interpret these desires on the part of the people, you will remember in my report to the Governor and General Assembly of 1937 that certain suggestions were made for improving the public schools.

Briefly, I wish to mention here those suggestions:

1. *Restoration of Salaries.* "In my opinion," I stated, "we have reached a point in our way out of the depression at which we should fully restore, beginning with the next school year, the salaries paid teachers, principals and superintendents under the original salary schedule."

2. *Curriculum Expansion.* On this subject it was said, "I should like to see a further development in our larger type high schools not only to meet the demands in the field of Agriculture, but also in Homemaking subjects, in Trade and Industrial subjects, and in Business Education including the distributive occupations. Paralleling this expansion in the vocational subjects, I believe the time is near when we can expand our curriculum to include more cultural subjects."

3. *Exceptional Children.* Under this head the belief was expressed that the State should recognize the responsibility for providing better opportunities for exceptional children, both the bright and the retarded.

4. *Supplementation.* Here it was suggested that the law should be written to allow the larger school districts to vote upon themselves taxes with which to enrich the educational program.

5. *Free Textbooks.* "I am recommending," I wrote, "that provision be made for inaugurating as rapidly as possible a system of free textbooks to replace the present rental system."

6. *Twelfth Grade.* Under this topic, the advantages of a twelfth grade were given, and the belief was expressed that the State should provide for the financial support of the additional grade in those schools desiring it.

7. *Transportation.* It was suggested that the law with reference to the purchase of new busses be made clear and definite, and that adequate provision be made by the State for the replacement of worn-out unusable bus units.

8. *Compulsory Attendance.* "It seems to me," I stated, "that a definite appropriation should be made for the purpose of seeing that every child within the compulsory attendance age limits shall take advantage of the educational opportunities made available to him."

9. *Superintendent's Qualifications.* It was recommended that the law be so written as to require all newly elected superintendents of schools to hold a superintendent's certificate authorized by the State Board of Education.

10. *A Building Fund.* It was suggested that provision be made for a larger loan fund from which counties and cities could borrow money for building projects.

In order to have funds necessary for making effective those recommendations that required financial support, I submitted to the Advisory Budget Commission a request for \$26,625,743 for the school year 1937-38 and \$27,269,018 for 1938-39. In the provision of funds for the operation of a free textbook system, however, it was recommended that the Treasurer of the State be authorized to issue and sell bonds of the State in an amount not exceeding \$1,500,000. No definite amount was named for the Building Fund suggested, since the members of the General Assembly did not look with favor on such a proposal in view of the fact that many units were in default to the present State Literary Fund.

All of us are now more or less familiar with what the General Assembly of 1937 did for public education. It was found, as you will remember, that adequate funds could not be raised to restore salaries completely, and so the appropriation for the public schools was figured on the basis of a ten per cent increase in the salaries of all school employees. The amounts decided upon for purposes other than salaries were based upon the requests made to the Advisory Budget Commission. The total appropriation made for the operation of an "eight months' term public schools" was \$24,396,367 for the school year 1937-38 and \$24,986,160 for 1938-39.

As contemplated by the General Assembly the salaries of all teachers, principals and superintendents were increased ten per cent. With the increase in the appropriation for vocational education, the curriculum was expanded some in this particular field of education. Under the regular appropriation for the support of the eight months' school term together with the local support from taxes or from other sources, the course of study has been broadened in many schools. I refer specifically to a greater number of programs of music including bands, to a larger number of programs of health and physical education, and to an increased number of business education departments.

No special attention in the form of a financial plan of support other than the regular appropriation was given to the question of exceptional children. It was provided, however, that a commission be appointed to study this whole matter and report to the General Assembly of 1939.

The law with reference to local supplementation was left practically as it was written, except that in three counties, Rowan, Gaston and Wake, local laws were enacted providing for elections in large school districts. As a result of these local laws, Belmont and Victory in Gaston and Spencer in Rowan have voted taxes to supplement the State school program. An election in Wakelon, Wake County, failed to carry.

A textbook law was enacted which provided that the basal textbooks used in the elementary grades be furnished free to the children enrolled in those grades.

Due largely to financial considerations no provision was made for the addition of a twelfth grade to the system of public education.

The law with reference to the purchase of new school busses was clarified, and the State appropriation for the purchase of new busses was made available immediately in order that old worn-out busses not suitable for safe transportation might be discarded.

The amount requested for the better enforcement of the compulsory attendance law was not allowed, nor was the change suggested with reference to the qualifications for a superintendent's certificate made. And as stated above, no building fund was set up.

I cite all of these things in order that you will know the facts with reference to what transpired immediately before and during the session of the last General Assembly. In my opinion, the public schools secured their proportionate share of the funds made available by appropriation. I think, too, although provision was not made for all my recommendations, that the public schools received every consideration possible by the acts of the General

Assembly and that a favorable spirit of "doing more" for the schools prevailed at all times.

Before making any recommendations for the consideration of the General Assembly of 1939, I should like at this point to review in a more general way the situation with regard to public education in the State. During my four years in office I have traveled over 170,000 miles and have made more than 600 speeches throughout the State. I have had an opportunity to talk before various groups of people, all interested in the welfare of their children. I have had an opportunity "to feel the pulse" of the people, to learn what they were thinking and what they desired. I have observed also the interest that is being taken in public education by the various governmental, civic and social organizations.

The membership of the parent-teacher association has increased from 58,000 in 1936 to more than 65,000 this year. This, to my mind, indicates a deeper interest by parents in the educational welfare of their children. It constitutes an effort on the part of the people to support the public schools with increasing interest and vigor.

The State Grange has always been a friend of the schools. That organization was especially helpful in obtaining the standard eight months' school term, and it has recently endorsed the "twelfth grade" as a needed addition to the public school system.

The American Legion has cooperated with public education, especially in the celebration of American Education Week and in conducting essay contests on government and patriotism. Recently, the Association of County Commissioners announced an essay contest on "Highway Safety" in the public high schools of the State.

Since 1933, when all local taxes for the operation of public schools were abolished, 39 of the 169 administrative units have voted taxes to supplement the State educational program. In addition three local districts, under special acts, have voted for better schools than the minimum program provided under State support. By this action on the part of the voters in these units 151,582 children were given the opportunity of an additional month of schooling during 1936-37.

All of these things indicate, to my mind, that the people are looking at the schools as they have never done before. They are demanding that the schools be strengthened in their weak places. They want their children to have an opportunity to prepare themselves for a fuller life than they as parents have had. And they want the schools to provide that opportunity.

I should like to point out the progress that has been made in the public schools within the past several years, the number of additional accredited schools, the additional departments of agriculture and home economics, the number of new and modern buildings constructed, and the increase in the number of boys and girls attending the high school; but all of this information is presented in subsequent pages of this report. I hope each of you will read that part of this report. We have tried to present a picture of the public schools in the limited space at our disposal. The illustrations presented are representative of the best situations. I am sorry that they are not true in more instances. I believe, however, that public education is a grow-

ing institution and before many years we shall have in this State a public school system comparing favorably with that in many of our northern states now rated higher than this State with respect to public education.

As will be observed from the statistical tables and charts presented, progress has been made. It will be noted also that there is room for still further progress. I believe this further advancement is coming. The morale of all of those who are working in and with the schools is higher today than ever before. The tax levying authorities are more sympathetic to public education. The local committees and the board members, both county and city, take an active interest in this great enterprise.

RECOMMENDATIONS

The following recommendations are made, not because they represent my views only as to the next steps to be taken with reference to public education, but because I believe they represent what the people of the State want. I am simply trying to interpret the general public notion of the people with respect to the public schools, although these views do correspond with my thinking in the matter.

1. Restoration of Salaries. As stated in my report to the General Assembly of 1937, I believe this question of restoring teachers' salaries should be the first concern of the present law making body. Of course, I realize, since we have departed from the original salary schedule set up in 1921-22, that it will be impossible to restore the salary of each individual teacher to what it was before the depression set in; but I mean by restoration the re-establishing of the maximum salary ratings for equivalent training as were in force prior to the preparation of the base of the present salary schedule in 1933-34. This original schedule, you will recall, had as its maximum for the highest training and experience a salary of \$133.33 per month. The new schedule reduced this to \$90.00 per month. Now, however, the highest monthly salary allowed is \$123.75. A recommendation was made to the 1937 General Assembly that this salary be fully restored, but as stated above this was not done. I now, therefore, renew this request to your honorable body; and in making this recommendation I have in mind that restoration of salaries will be effective in a corresponding measure to all teachers, principals and superintendents.

In making this recommendation, I am not thinking solely of these school employees, although such should be a major consideration. They have shown their interest and their loyalty to the public schools in numerous ways. The average level of training of this personnel continues to improve from year to year, as is shown elsewhere in this report. Their hearts and souls are in this work, or else they would not continue at it from day to day, year in and year out, at the relatively low financial remuneration the profession affords. They deserve the small increase recommended on these grounds alone, but I am thinking of a far more important reason—the children's interest, the future welfare of the State. I believe in good teachers, and that only the best teachers can do good teaching. Unless we make the profession of teaching reasonably attractive financially, the best teachers will not be at-

tracted to the profession. Right now we are training more teachers to take the place of those who annually leave for one cause or another. Many of these are the best that are available; but some, of course, are those having the lowest training. If the salary is not sufficiently adequate, those young men and women with ability, personality and ambition will not train themselves for teaching. I am sure you can see what would result. Those persons with mediocre or inferior native ability and personality will gravitate to the profession, and then in the employment of new teachers there will be no choice except the old teacher with the lower training and the new teacher of mediocre ability and training.

In the building of character and citizenship North Carolina should have the best, but that best will not be obtainable as long as we continue to pay relatively low salaries. In order to provide for the citizenship of tomorrow we must begin today. I wish to recommend, therefore, that you give this question first consideration in your provision for the State support of the public schools for the next biennium.

2. Vocational Education. The Federal Government provides funds for the teaching of agriculture, home economics and trade and industrial subjects. Since its beginning this type of training has had a tremendous growth. The total funds from all sources have been limited, however, and today out of the total white high school enrollment of approximately 150,000 there are fewer than 20,000 taking agriculture, fewer than 1,700 taking home economics, and fewer than 1,000 taking trade and industrial subjects in day schools.

We should have a substantial increase in funds not only to match the Federal funds in this respect, but for the purpose of broadening the vocational program—in order to provide additional courses of a vocational nature. Not all boys want to be farmers, anymore than all girls want to be school teachers. State funds should be made available, therefore, to provide other courses which fit for life those of our youth who will not, or cannot, go to college. Specifically, I believe most of our town high schools and for that matter some of the larger rural high schools should have a strong, well-organized industrial arts course—one that would provide exploratory and try-out experiences for boys and girls in their teen ages. Such a course should also include a course in occupational guidance, to give the pupil some preliminary conception of the thousands of occupations from which the people of the United States can earn a livelihood.

3. The Twelfth Grade. My recommendation for the establishment of the twelfth grade is being renewed, because I believe the time is ripe for its introduction. Governor Hoey has sensed the need for the additional training that another grade will give to our boys and girls, and on several occasions has advocated its inauguration. The Governor's Commission on Education, from meetings held in several of the larger centers of the State, has learned that the school patrons like the twelfth grade plan. I, too, in my travels about the State, have found a strong sentiment for it.

Already, under local support a twelfth grade has been introduced into the following sixteen units:

Albemarle	Hamlet	Roanoke Rapids
Asheville	Lenoir	Rockingham
Charlotte	Lumberton	Rocky Mount
Durham (city)	New Hanover	Wadesboro
Greenville	Raleigh	Washington
	Reidsville	

If these units have found a need for this additional training, and have met that need from their local budgets, then it is apparent that such a need is prevalent in the 153 other administrative units, many of which cannot vote a tax for the additional cost necessary for its support.

The Governor's Commission has estimated that the addition of the twelfth grade to the public school system will cost approximately \$750,000. I believe that this is a fair estimate of cost for the first year of its operation, but there would be a slight annual increase as the number of boys and girls taking advantage of it increased. And I believe also that this cost would be small for the returns that a twelfth grade would give the State in terms of better citizenship.

In our present State-supported eleven-grade system a child, provided he makes normal progress from the first through the eleventh grade, gets 88 months of training. If the term were extended one month this training would be for 99 months duration. If, on the other hand, a grade is added to the present State-supported term, the same child would secure 96 months of training within the same yearly training period. In the former case a month would be added each year making a total of eleven additional months, whereas by adding a twelfth grade the additional training period is added for one school year of eight months. There is an advantage, not considering its cost, in this latter alternative in that it more nearly fits the needs of boys and girls at this time, when they are needed on the farm and in the home.

I gave in my former report some reasons, as I saw it, for requiring the additional year's training in North Carolina public schools. Very briefly, I wish to repeat these reasons at this point in this report:

1. *Intelligent Citizenship.* "If intelligence is necessary to good citizenship," I said, "and if it is conducive to the development of citizenship, the addition of another year to the high school course, the difference of a year's training, will surely be reflected in a more superior citizenship."

2. *Vocational Education.* Most boys and girls do not go to college. The quantity and quality of all their training is received in the secondary school. This being true these boys and girls should be given the type of training that will more nearly fit them to function efficiently as members of society. I believe, therefore, that an added year for these boys and girls, coming at a time when jobs are scarce anyway, will add to their qualifications when they begin to seek a job by which they are to earn a livelihood.

3. *Preparation for College.* About twenty-five per cent of our high school graduates go to college. The colleges tell us that many of these are not prepared for college work. Whether this be true or not, it is certainly a fact that a person with an 88-months training foundation cannot compete

with a student having had 96, 99 or 108 months preparation. This is the case in North Carolina today, and it is undoubtedly true that many of the boys and girls who have failed in college would have succeeded had they had a longer period of training.

4. *Character Education.* As was said in my former report, "the longer the student stays legitimately in school the surer he is of developing those traits which are the component parts of character." A study of 2,400 recent commitments to State Prison revealed that only 660 had received any training beyond the elementary school. In other words, 72.5 per cent of the total commitments had some training in the lower grades. Only 68 of the total had finished high school. It seems to me, therefore, that an additional year's training making possible more practical education would give many boys and girls an opportunity at an age when it is needed most, and would be the wisest sort of investment on the part of the State in citizenship training. Money wisely spent at this point of a person's life by the State should perhaps prevent its expenditure later on for prison commitments.

5. *Economic Consideration.* This point has been discussed indirectly in 2 and 4. It is very difficult at present even for some college graduates to secure employment. It is even more difficult for boys and girls of high school age to find jobs. Since they are not needed in society on a wage earning basis, the purpose of society will be more perfectly served if they are kept in school.

4. **Retirement System.** I believe the General Assembly should consider very carefully the advisability of the immediate establishment of a retirement system for the teachers of the State. Under authority of the last General Assembly a commission was appointed to study this whole question, and although I do not at this time know the exact recommendations of that committee, I personally believe that the State should do something for the aged and incapacitated teachers, who have given their lives to service of training the youth of this State, and many of whom have now reached the end of their usefulness. From the point of view of the child, it would be economical to the State in a majority of instances and certainly it would bring a measure of happiness to these teachers, if all teachers could be retired after they had given a specified number of years of service to the profession. In view of the fact that their salaries have always been low, it would be no more than simple justice.

5. **Teacher Tenure.** The question of teacher tenure also should be very carefully considered by the members of the General Assembly. Conditions in some of our counties are really shocking. A teacher may never know whether her services have been satisfactory or not. In a good many instances teachers have been dismissed at the end of the term for merely political reasons, and only notified of this fact when the school is about ready to begin the next year's session.

In order to build a good school system, one with the child in mind, teachers should be continued in employment on the basis of their merits—their scholarship, experience and personality. Dismissal should not occur unless there is a just cause, and even then the teacher should be given adequate

notice. I believe, therefore, that some legal protection should be provided for the good teachers of the State in order that they may not be bandied about at the whim of some local politician or to make room for some local favorite.

6. Compulsory Attendance. Under the present law all children between the ages of seven and fourteen years are required "to attend school continuously for a period equal to the time which the public school in the district in which the child resides shall be in session." I believe this law should be amended by changing the upper age limit to sixteen years.

The present labor laws of the State provide that no child under sixteen shall be employed in any manufacturing occupations, or in many of the non-manufacturing occupations, while school is in session. There is a gap, therefore, between the maximum compulsory age limit and the minimum age when employment may begin. When many boys reach this maximum compulsory attendance age they leave school; and since there is no profitable employment, except agricultural or domestic work which is exempt from the age limitations of the law, many are virtually turned loose on the streets. I sincerely believe, therefore, that the law requiring compulsory attendance at school should be extended to sixteen and thus close up this existing gap. Our alarming increase in juvenile delinquency would seem to justify this change.

7. Exceptional Children. As stated in my report to the General Assembly of 1937, something should be done to give the exceptional school child, both the fast moving type and the one that is normally slow, a better opportunity to prepare himself for society. Under our present graded system, which is inevitable where large numbers are given instruction, the curriculum is organized for the average child. I believe we should not only instruct these average children, but that we should also provide instruction appropriate for these children having exceptional mental abilities.

Under authority of the last General Assembly, a commission has been appointed to study this whole question. I am unaware at this time what that commission will recommend, but whatever that may be, I hope the members of the General Assembly will give it due consideration.

8. Superintendent's Qualification. I wish to renew my recommendation that all new superintendents employed be required to hold a Superintendent's Certificate as authorized by the State Board of Education. This recommendation is being made because I believe that a superintendent who does not have this certificate is at a disadvantage in the administration of the schools and in working with the teachers under his supervision. Advice on professional problems cannot be given by the superintendent unless he has had the professional training himself, or unless he has someone upon whom he can rely for help in this respect. For the efficiency of the teaching process, manifestly, the certification requirements for superintendents should be no less than those for teachers and principals.

9. Local Supplementation. As stated above, 39 administrative units have voted a supplementary tax to provide better educational opportunities than now provided on State standards of cost for the children in those units. In

two local districts in county units, Gaston and Rowan, a tax was voted under authority of special acts applying only to these two county units. Recently, a tax has been voted in two other city units, Kinston and Sanford; and the schools in these two units will offer instruction for a ninth month next year.

Authority was given by the laws of 1933, 1935 and 1937 for administrative units as a whole to vote additional taxes to operate schools of a higher standard than that provided by State support. I believe the time has come when this privilege should be extended to large districts complete as to an instructional unit. If this privilege is granted to city units and to large units in two counties, then it seems only fair and right that other large districts should be given this democratic privilege to decide for themselves what they shall do with reference to the provision for better schools for their children.

Some may think that such a privilege, if granted, would be abused, and that once the gap is let down, so to speak, we would have an epidemic of local tax voting over the State. I, personally, do not concur with that notion. In the three counties, Gaston, Rowan and Wake, where the people in local districts were allowed to vote, only three elections have been tried, one of these having failed. I believe the democratic principle should govern such questions, and whatever decision is made by that method then it will be final until another effort is made.

There is another aspect of the question of financial support that should also be considered in connection with local supplementation. It is generally considered that the State support provided is for a minimum program. The support provided has increased very rapidly since its beginning in 1933, we must admit. That support, however, has not reached the total cost of the school program provided before the economic depression set in. It appears also, so those charged with finding sources of taxation say, that a point is being approached with reference to financial support beyond which it will be impossible to go. The cost of education, on the other hand, in order to keep pace with other economic phases of life, will continue to increase. The training of teachers improves every year and better instruction in every way, we believe, is being provided from year to year. This improvement in the school system will cost more money, and if the State is unable to provide the necessary support, then the local units should at least be given the right to say whether they shall provide the additional money for a higher standard of public school than provided by the State. I wish to recommend very strongly, therefore, that this provision for local supplementation be written into the new school machinery act.

10. State Funds. On page 17 is presented a table giving the expenditures from the State appropriation for public schools during 1937-38, the estimate of expenditures for 1938-39, and my request for State funds to the Advisory Budget Commission for the operation of the public schools for 1939-40 and 1940-41. These request figures include a five per cent increase in the salaries of all school employees, and estimated necessary increases in all other items. It will be noted that the division as to race is not made. This division is made on the basis of need when the allotments are made by the State School Commission to the administrative units.

The total requests of \$27,373,508 for 1939-40 and \$28,177,301 for 1940-41 represent approximately a 13 per cent increase in State funds over the respective years of the preceding biennium. This request includes \$200,000 for sick leave, an item for which no appropriation was made by the last General Assembly; but which, in my opinion, should be included in the appropriation for public schools if the funds can in any way be found.

In arriving at the total requests for public schools, each of the items has been very carefully considered, and these requests represent the minimum amounts for operating the program of public education on State standards of cost. I hope, therefore, that this General Assembly will not make the appropriation for the support of the public schools less than the amounts requested.

APPRECIATION

Before closing this section of this report I wish to express my appreciation for the splendid help and cooperation that I have received from other departments of the State government and from the many individuals who have given me support and advice as Superintendent of Public Instruction. After all, the schools belong to the people, and it is for them to decide what they want. In this report, in my capacity as the representative of the people, I have tried to present their views as to the improvement of the public schools, and as to the building up of a State school system that will offer to our boys and girls the best educational opportunity possible.

His Excellency, Governor Clyde R. Hoey, has given his wholehearted cooperation in an effort to improve the school situation. On many occasions he has advocated school measures—free textbooks, more vocational training, twelfth grade, and increased salaries for the school personnel. Without this strong advocate, I do not believe we could have made as much progress as has been accomplished during these recent years.

Then, too, the various other departments of State government are to be commended—the General Assembly and the Advisory Budget Commission for liberalizing the laws and increasing the appropriation for schools; the State Commission of Highways and Public Works for its cooperation in looking after the roads over which more than 4,000 school buses travel; the Highway Patrol and the Division of Highway Safety for examining the bus drivers and for instruction given with reference to safety on the highways; the State Board of Charities and Welfare for making it possible for many indigent children to attend school by providing necessary clothing; and the State Board of Health for cooperation in the matter of epidemics and in giving remedial treatment to those school children needing attention.

The State Board of Commercial Education was set up by the General Assembly of 1935. I think this Board has done much to improve the character and type of the private commercial schools of the State in helping to eliminate undesirable practices and conditions.

School board members, county commissioners and other tax levying authorities, and the local school committees have on the whole been especially cooperative in providing necessary local funds for the erection of new build-

ings and for the purchase of additional school buses and new equipment, and in giving attention to day by day local problems pertaining to the schools.

To that great army of teachers, principals, superintendents, janitors, clerks and secretaries, and other school employees, without whose persevering presence the schools could not operate, I offer my deepest appreciation for their splendid spirit throughout my entire administration of four years. The teachers of the State, after all, do the instructional work, and it is they who should be given the major credit for the success of this public undertaking.

Then, too, I wish to mention again the work of the Parent-Teacher Association, whose support of the local and State school programs has ever been present. I like to think of this organization as one of the great arms of the public schools, ever ready and willing to work for their improvement.

In conclusion, I wish to express my appreciation to the members of the State Board of Education and the State School Commission for their counsel and advice, and to the staff members of the State School Commission and the Department of Public Instruction. These employees have worked in season and out, regardless of the hours of work, for the advancement of the public schools, and any credit given for the success of the State's administration of the public schools should be to these devoted employees.

The Public Schools and the Children of the State

ADMINISTRATION

There are at present 100 county and 69 city administrative school units in North Carolina. The county units comprise that area of the county outside of the established city units. Where no city units exist, the entire area of the county is the administrative unit.

The administration of the public schools in these units is vested in ten agencies established either under constitutional authority or by the enactment of legislation by the General Assembly. Five of the ten are local in character and five are State agencies.

Local Agencies

The five local agencies are: the local committee, the city board of trustees, the city commissioners (or other tax levying authority), the county board of education and the county board of commissioners.

1. *Local Committee.* The local committee, appointed under legislative authority by the county board of education for a term of two years for each school district, selects the teachers and principals subject to the approval of the county superintendent and the county board of education and has general custody and care of the school property in the district.

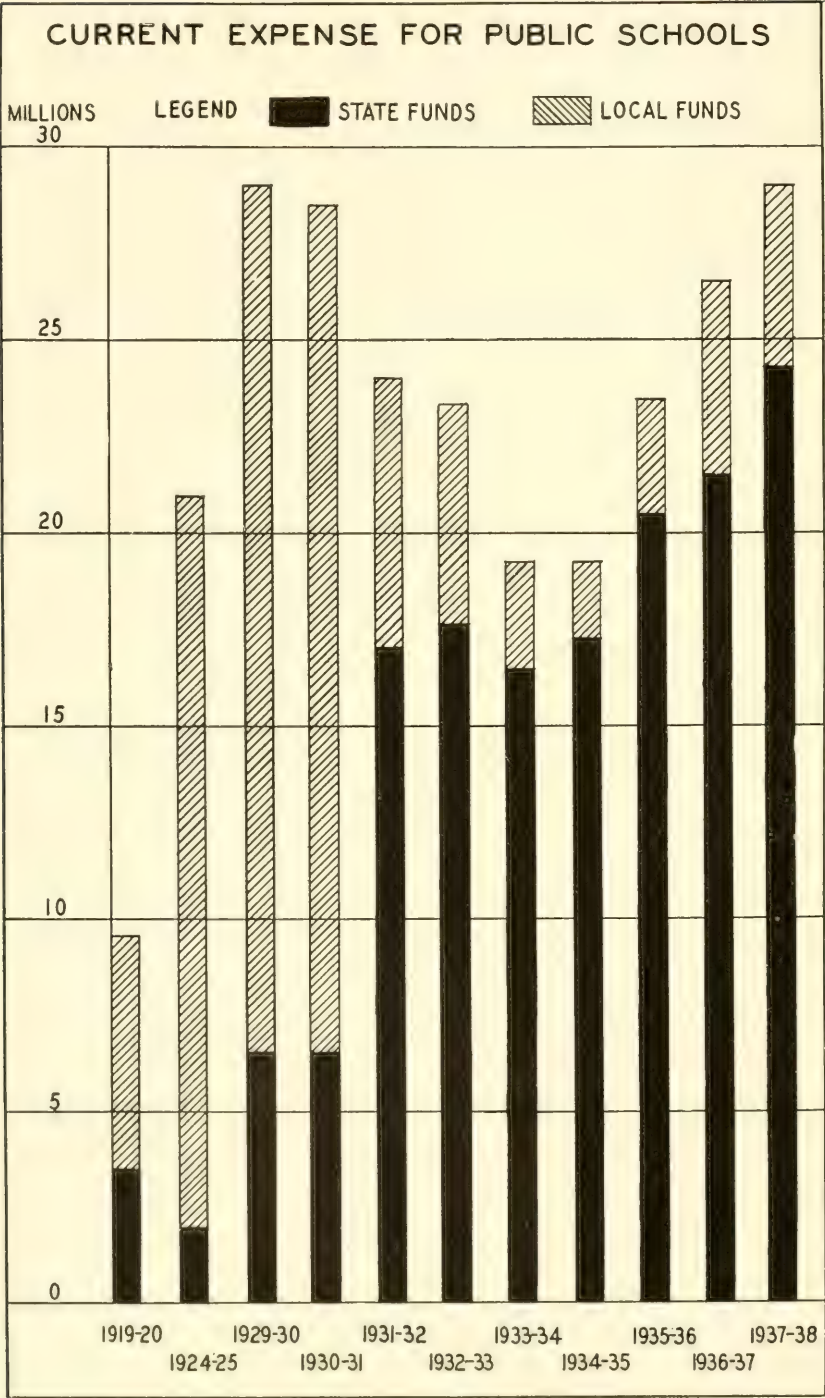

Current Expense for Public Schools

YEAR	STATE*	LOCAL	TOTAL

1937-38	†24,342,926.58	†4,808,475.10	29,151,401.68

* Includes expenditures from Federal and Philanthropic funds.

† Expenditures for vocational education in local.

‡ Budget estimate.

2. *Boards of Trustees.* In each of the city units a board of trustees is elected or appointed in the manner prescribed by law. This board prepares and approves the budgets for current expense, debt service and capital outlay subject to the approval of the county board of commissioners, or other tax levying authorities, and the State

School Commission. It also elects a superintendent of the unit, subject to the approval of the State Superintendent and the State School Commission, and teachers and other employees upon the recommendation of the superintendent, who is the administrative office of this board.

3. *City Commissioners.* The city commissioners, or other tax levying authorities, levy the taxes voted in the city administrative unit for the extension of term or for operating the schools on a higher standard than that for which the State makes provision, and for debt service.

4. *County Board of Education.* The county board of education, consisting of three or five members who are nominated biennially at party primaries or conventions, are appointed by the General Assembly, which meets in January of the odd years, for

1937-38	33.10	37.79

The board of education adopts the budget and approves the school program.

a period of two, four or six years. The county board of education has the general management and control of the educational affairs in the county administrative unit. This board appoints a county superintendent, subject to the approval of the State Superintendent and the State School Commission, and a school committee for each local district. The county board of education is clothed with those discretionary powers relating to the administration of the schools that are not specified in the law or by rules and regulations of the State School Commission. It also decides upon the site and character of all school buildings, and administers the operation of the schools in accordance with the rules and regulations of the State School Commission and the acts of the General Assembly. The county superintendent, whose term of office is for two years beginning July 1 of each odd year, is the administrative officer for the county board of education.

5. *County Commissioners.* The board of county commissioners, a body provided for under the Constitution, approves that part of the school budget financed by county funds, including funds for the erection and repair of necessary school buildings, and levies the taxes therefor. The commissioners are elected by the people for a term of two years.

State Agencies

The five State agencies having a part in the administration of the public schools are: the Superintendent of Public Instruction, the State Board of Education, the State School Commission, the State Board for Vocational Education, and the State Textbook Commission.

The county commissioners consider the school budget.

1. *Superintendent of Public Instruction.* The Constitution of North Carolina provides for a Superintendent of Public Instruction, who shall be elected by popular vote every four years. The Superintendent of Public Instruction is responsible for promoting interest in public education, interpreting the school laws, determining standards for approved schools, assembling and disseminating statistical data, preparing curricula materials for the teachers of the public schools, and such other duties as are or may be vested in him by law. He appoints the staff of the Department of Public Instruction to assist him in performing these duties.

The State Superintendent is *ex officio* secretary of the State Board of Education, vice chairman of the State School Commission, chairman of the State Board for Vocational Education, and chairman of the State Textbook Commission. In addition, the State Superintendent, under the law, assists the governor in the appointment of the Elementary Textbook Commission and the State Committee on high school textbooks.

2. *State Board of Education.* The State Board of Education, consisting of the Governor, Lieutenant Governor, Secretary of State, Treasurer, Auditor, Attorney General and the Superintendent of Public Instruction, is provided for in Article IX of the Constitution. This board has charge of the Literary and Special Building Funds and the public lands owned by the State. It also makes rules governing the certification of teachers, and adopts the textbooks used in the public schools. Originally, this board had authority to legislate and make all needful rules and

regulations in relation to free public schools and the educational funds, but its duties in this respect in recent years have been transferred by legislative enactment to the State School Commission.

3. *State School Commission.* The State School Commission was set up by the General Assembly of 1933 to succeed the State Board of Equalization, a body created in 1927 to equalize values in the several counties as a basis for distributing the equalizing fund provided for schools. This Commission is composed of the following: the Lieutenant Governor as chairman, the State Superintendent of Public Instruction as vice chairman, the State Treasurer, and one member appointed by the Governor from each of the eleven Congressional districts.

The commission decides what schools are to be operated, has the power to consolidate districts and transfer children from one unit to another, and may suspend any school after six months, whenever the average daily attendance does not justify its continuance. It determines by districts and races the number of elementary and high school teachers to be paid from State funds, and sets the standards for operating the public schools for an eight months term in each county and city administrative unit.

The Commission also provides for and supervises the transportation of pupils at public expense, makes rules and regulations governing the financial management and control of all administrative units, provides for auditing the school funds, approves the election of county and city superintendents, and jointly with the State Board of Education determines and fixes a State

standard salary schedule for teachers, principals, superintendents and other school employees.

It employs an executive secretary and staff who administer its rules and regulations.

4. *State Board for Vocational Education.* The State Board for Vocational Education was created by the General Assembly of 1917 in order to meet the provisions of

* Budget estimate.

the Smith-Hughes Education bill enacted by Congress. This Board consists of the State Superintendent of Public Instruction and three other members appointed by the Governor—one to represent agriculture, one to represent home economics, and one to represent trades and industries.

The duties of this Board are to cooperate with the Federal authorities in the administration of the Federal Vocational Act and to administer legislation enacted by the Congress and the General Assembly of North Carolina pursuant to vocational education. It also formulates plans for the promotion of vocational education as a part of the public school system, and cooperates with the local authorities in the establishment of vocational classes.

The State Superintendent with the advice and consent of the Board designates the staff necessary to carry out properly the provisions of the law and the rules and regulations of the Board.

5. *The State Textbook Commission.* The State Textbook Commission was created by the General Assembly of 1935. This commission consists of five members: the State Superintendent of Public Instruction as *ex officio* chairman, the Attorney General, the Director of the Division of Purchase and Contract, and two members appointed by the Governor for a term of two years each. It is the duty of this Commission to purchase the necessary textbooks, operate a rental system of textbook distribution to the children in the public high schools of this State, and to provide free basal textbooks to the children in the elementary grades.

SCHOOL PLANTS AND EQUIPMENT

"The building of all new schoolhouses and the repairing of all old schoolhouses over which the County Board of Education has jurisdiction, shall be under the control and direction of and by contract with the county board of education. But the board shall not be authorized to invest any money in any new house that is not built in accordance with plans approved by the State Superintendent, nor for more money than is made available for its erection."

The above section of the North Carolina school law is the authority which the State Department of Public Instruction has for approving plans for schoolhouses. A building code is not written into the law. Specific items are not required nor forbidden by the statute. This is doubtless wise, for statutory requirements might become antiquated before they could be amended or repealed. This has been the experience of some States that have incorporated building codes in their school laws. On the other hand, a few architects and school administrators have the idea that plans and lay-outs for school buildings approved many years ago are acceptable today and, therefore, consider it unnecessary to submit plans for criticism and approval. This is doubly lamentable because these same school officials assume that instructional methods and administrative procedures recommended a quarter of a century ago are all right for present day schools.

It is the duty, the function and the practice of the Division of Schoolhouse Planning to continuously explore the field of schoolhouse planning, to analyse the trends and to study the developments in school plant practices to the end that "all new school-

houses" may be planned according to the most modern and efficient standards. All plans submitted to the Division are studied, evaluated and criticised according to these criteria. Those school units which avail themselves of this service invariably secure bet-

Appraised Value of School Property

ter buildings than those units that depend upon school administrators and school architects of uncertain proficiency in schoolhouse planning.

Illustrative of the recent developments in the field of schoolhouse planning may be mentioned:

1. A new philosophy with regard to the housing facilities for primary and elementary grade children. For a number of years a disproportionate emphasis was given to high school buildings. Lower grade children were quite generally housed in quarters inferior to those provided for the higher grades.

**School Property Value Per Pupil
Enrolled**

The minimum dimensions for specially designed modern day primary rooms are 22' in width by 40' in length. They are equipped with at least 20' of bulletin board and a like amount of black-board. Attention is directed to the emphasis placed on ample bulletin board, necessary for modern methods of teaching. These rooms should also be provided with bookcases, magazine racks, project lockers, storage chests—the tops of which can be covered with pallets for rest periods—individual room toilets, lavatories and drinking fountains.

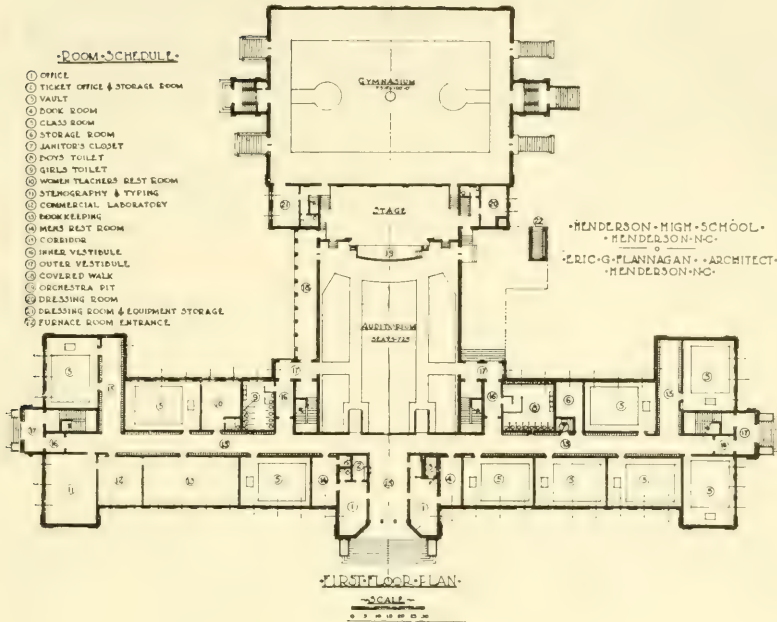

2. Library units are now planned to meet the needs of the school according to scientifically developed standards. A small room, which was in reality simply a book storage room, is no longer considered adequate for a library in a standard school.

The following criteria are used in evaluating our modern library rooms:

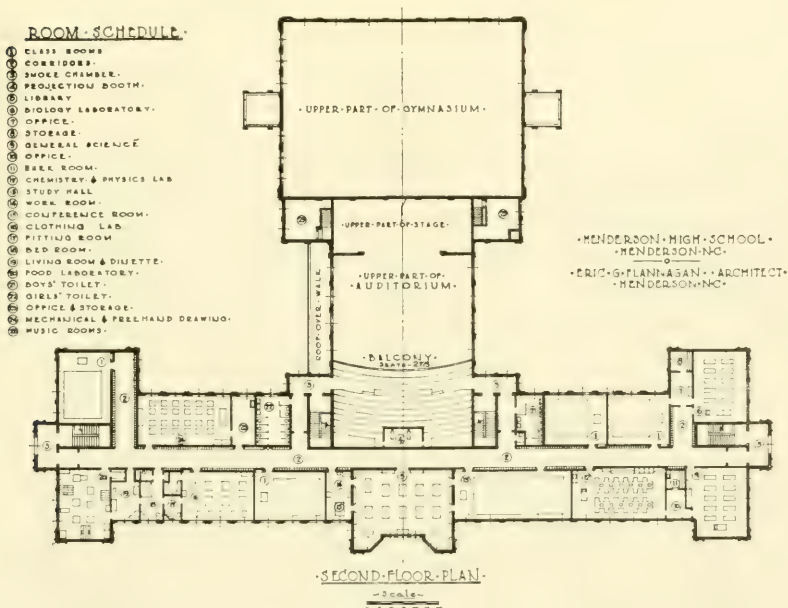

- a. Ample and attractive space for the books required to be read by the children in the school.
- b. Comfortable and inviting space where school children and others may assemble to read and study and become generally ac-

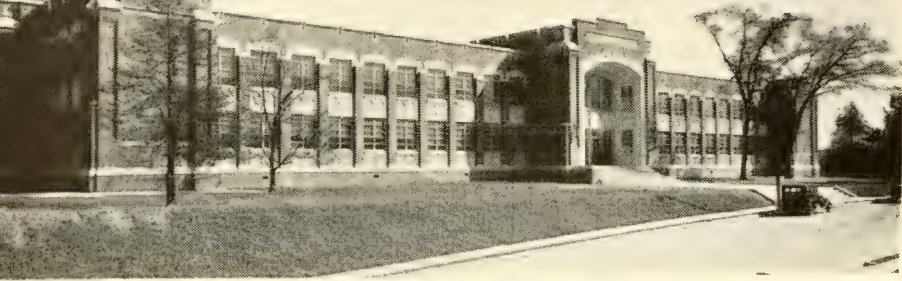

The modern school plant is carefully planned from basement to roof.

Auditorium, gymnasium and cafeteria are integral parts of a school plant designed to meet all the needs of growing boys and girls.

The modern school building is functionally designed; adequate lighting and ventilation are provided without destroying the architectural beauty of the structure.

quainted with books of all kinds and with magazines and periodicals.

c. A work laboratory for history, literature, biology, science and indeed all the subjects in the course of study.

Rules to determine the size of a library are:

a. In small schools sufficient space to take care of an entire class. In a school accommodating up to 300, a reading and stack room 22' in width by 36' in length is the minimum. In addition to this there should be a work room of approximately 12' x 12' and a conference room approximately 10' x 12'.

b. In large schools space sufficient to care for 10% of the enrollment with from 20 to 25 square feet per reader is ample for the general library room, its furniture and equipment.

Ample shelving is considered an integral part of the library room.

3. School cafeterias are now considered a definite and necessary part of a modern school plant. Research, study and experimentation have demonstrated that the properly constructed and efficiently administered cafeteria is the most satisfactory method of feeding large numbers of children economically and quickly.

The health of school children is the justification for the publicly subsidized cafeteria. Therefore, the first consideration in planning it is that every feature should promote health. Sunshine, ventilation and a type of construction that will make spotless cleaning easy are fundamental prerequisites.

Improvised rooms in damp, dark basements are no longer considered acceptable for cafeteria purposes. Standards and details for satisfactory cafeterias have been prepared by the Department.

4. Plans for physical education buildings which meet the demands for the physical education programs required in standard schools have been prepared by the Department.

5. Approved plans for home economic cottages and vocational buildings embodying space and facilities recommended by experts in these fields are available through the Department to any school unit desiring them.

In summary, the Department of Public Instruction has available materials and recommended practices in school plant planning which are the product of the research and study of all the people in the country engaged in the planning of school plants.

If school architects and school administrators will avail themselves of the services available through the Department for future schoolhouse construction in North Carolina, there will be embodied in them the most modern principles of schoolhouse planning.

The plan of the classroom and the selection of proper equipment combine to create an environment conducive to purposeful learning.

TEXTBOOKS

The State Textbook Commission has been functioning for three years. During the first year, 1935-36, elementary and high school books were rented. During the following year supplementary readers were added. The 1937 Legislature provided for free basal books in the elementary grades, and this program was started during the school year 1937-38. The table shown below will give some information as to the volume of business handled during these three years.

The first part of this table shows the total expenditures for books by years and by departments. It will be noticed that the expenditures for elementary books increased notably in 1937-38 when these books were made free to all the children. The expenditures for supplementary readers also increased rapidly, while the expenditures for high school books remained reasonably steady through the three years.

The second item is a statement of the number of books owned

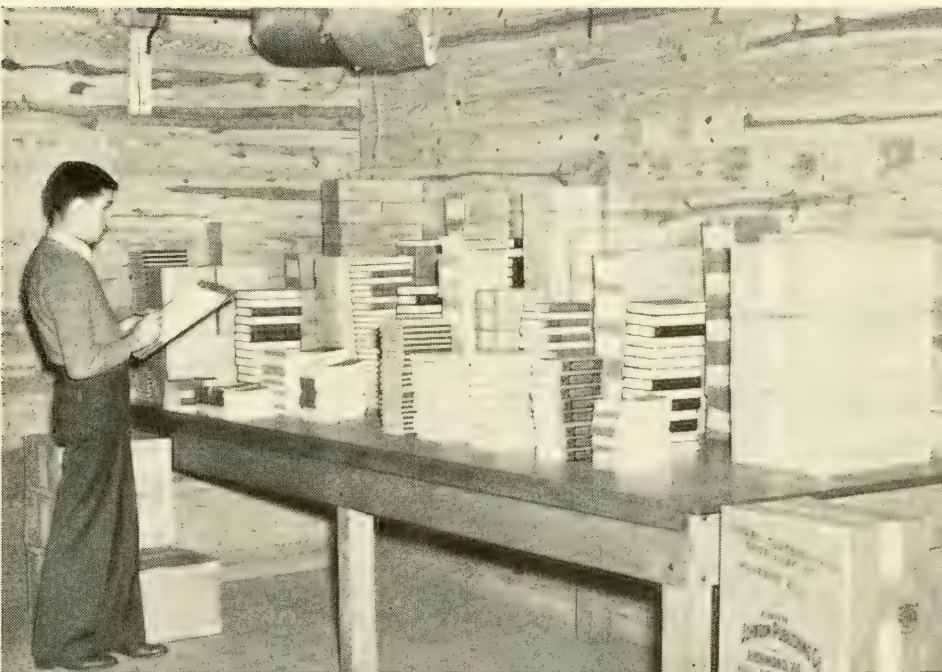

Textbook Data				
	1935-1936	1936-1937	1937-1938	TOTAL

Old Books		10.95		10.95

at the close of each fiscal year. These figures are net and do not include any books sold or lost. The sales and losses were deducted at the end of each fiscal year in order to show the total number of books to be carried forward for the beginning of the following term.

Section 3 of the table shows the income of the Textbook Commission since its beginning. It is quite noticeable that the income from rentals of high school books and supplementary readers is increasing steadily, and that the sales decreased to a great extent during the year 1937-38. This trend is very much in keeping with the experiences of other agencies in the operation of the rental system. The sales diminished in elementary books during 1937-38 because these books were made free at that time. However, the deduction in sales for high school books was almost as noticeable as in the elementary field. The damage fees increased steadily each year in keeping with the volume of business handled.

In establishing a program of textbook rentals the State of North Carolina entered a field in which no other state had ever had any experience. Other states have watched with interest the developments of the system.

Filling an order for textbooks.

they come on foot.*

GETTING TO SCHOOL

The mode of getting to school in North Carolina, as in other states, varies. Many children walk, some go in private cars or other conveyances, while a great many are transported at public expense by bus.

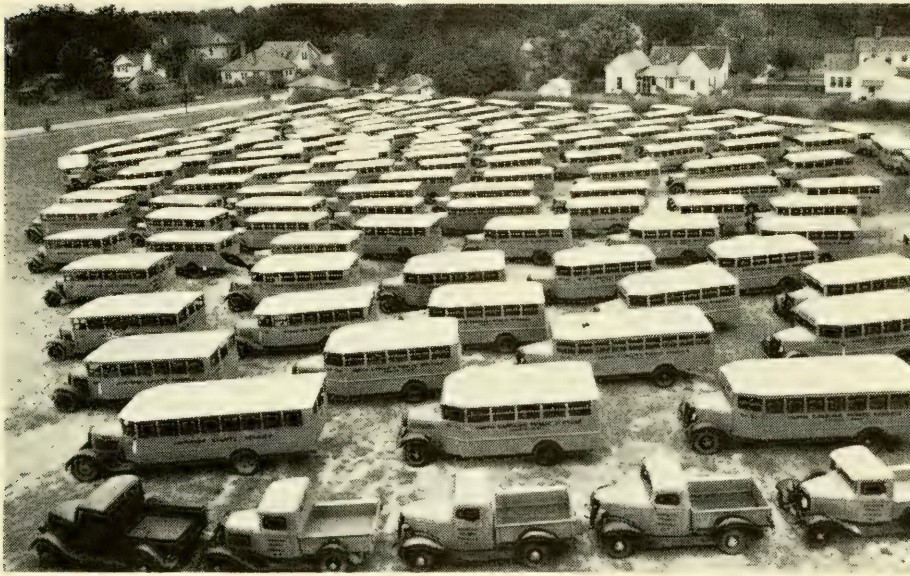

The pictures on this page illustrate that most ancient method of motivation, "foot travel." A majority of the boys and girls of North Carolina use this means of getting to school. Due to modern highway transportation methods, it will be observed that vigilance and care must be exercised in order that the children may get to school and return home "safe and sound."

During the past biennium a concerted drive for safety has been carried on throughout the State. In practically all schools safety organizations such as the School Boy Safety Patrol have been formed. The State Highway Patrol and local law enforcement agencies have cooperated in the undertaking and many civic organizations have sponsored campaigns for safety which have directly affected the child in his going to and from school.

*Safely to school and
safely home.*

Under any system of vehicular transportation, there must be equipment. Practically all vehicular transportation under the State system is by motor bus. The picture below shows the motor transportation equipment in one county administrative unit.

Part of the equipment used in transporting over a quarter of a million school children daily.

Approximately 4,000 busses similar to these are operated in the State, carrying daily almost 300,000 children to school and back home. According to the latest available information North Carolina has the largest transportation system in the Nation.

Maintenance is an important factor in the economical and safe operation of school busses

The cost of operating this bus system including replacement costs amounts to approximately \$2,000,000 annually. On a per pupil hauled basis this is slightly less than \$7.00 per year, which according to the latest records is the lowest of any state in the Nation. The average annual per pupil cost for the United States as a whole is \$18.92. The pupil cost is highest in Nevada at \$56.52 per year.

The policy of regular replacement insures adequate and modern equipment

* Information not available.

In order to provide economical and safe transportation, all bus equipment is periodically inspected, worn-out parts replaced, and new equipment purchased. The public transportation system is an integral part of the State's public school system, and the operation of this fleet of busses is paid for from the General Fund of the State's Treasury.

Supervision makes for orderly loading and the best use of seating space.

Below—(1) The student driver must be examined and certified by the State Highway Patrol.

(2) This STOP sign is the most widely respected traffic signal in the State.

No

THE SCHOOLS

Due to the erection of large modern buildings and the provision of transportation at public expense, it has been possible to care for larger numbers of children in a school. There is a definite tendency for the number of elementary schools to decrease for this very reason. At present, as the accompanying table shows, there are approximately 4,000 elementary schools in operation in the State.

In the development of a school attention is paid to certain factors which are generally recognized as essential to the adequate training of boys and girls for citizenship. Some of the factors are (1) length of term, (2) size of school, (3) training of teachers, (4) equipment, and (5) course of study.

Schools meeting certain standards with respect to these factors are given an accredited rating by the State. For the elementary schools this system was begun in 1924. At the end of the first year 56 schools met the standards for accreditation. Today a total of 589 elementary schools have met the requirements prerequisite for the ac-

credited rating.

There are 946 schools in the State offering instruction on the high school level, 737 for white boys and girls and 209 for Negroes. Of this number, 832 have met all the requirements for accreditation.

THE TEACHING PERSONNEL

The exact responsibility or place of the teacher in the scheme of education changes from decade to decade, but the primary importance of the teacher remains the same. She and the child still constitute the major elements that make up the educational pattern. They represent two sides of the triangle, the third, in a broad sense, being the environmental influences with which they are surrounded. Perhaps at no other time in our educational history have we been more conscious that education in its final analysis never goes beyond Mark Hopkin's log with a teacher at one end and a student at the other.

Twenty years ago there were slightly more than 16,000 teachers employed in the public schools of the State. Today the number of teachers is approximately 25,000, at least 85 per cent of whom are women. During the two decades the number increased about 50 per cent. It will be observed that for the five-year period, 1931-32 to 1935-36, inclusive, fewer teachers were employed annually than for the session 1930-31. This is due to the fact that (1) the teaching load, that is, the number of pupils per teacher, was increased by legislative enactment beginning with 1931-32 and (2) local tax districts were abolished eliminating supplementary tax, one purpose of which was often to employ extra teachers. The elementary school enrollment has about reached the saturation point. The gradual increase in the number of teachers is due mainly to the increase in high school enrollment and to the increase in the number of local tax districts. Out of 169 administrative units now in the State, 39 have voted

upon themselves local tax with which to supplement their school program.

Statutes require that a teacher be at least eighteen years of age, that she have sound health and that she hold a certificate in force, issued in accordance with the law. At the present time there would be little need for the legal minimum age since only the most precocious individual could be less than 18 years of

age by the time she had secured the necessary formal education to be issued a teacher's certificate. But this has not always been true. Fifteen years ago, one could teach in the elementary school when one had had only two years of high school education. Today the beginning elementary teacher must have had three years of college education, while the high school teacher, since 1931, has been a four-year college graduate.

A prolonged period of education is necessary to properly equip a teacher. First of all she must be an intelligent citizen, not an easy task in this very complex and complicated age. Then she must have both breadth and depth of knowledge to serve the needs of children in this modern day. She must be familiar with the basic material constituting the curriculum of the school child, have a knowledge of children and know how to teach. Indicative

of this concept of teacher education are the pictures which show some activities of student teachers. This student teaching is at the very heart of the professional education of the prospective teacher.

Knowledge is important, an essential prerequisite in the qualification of a teacher. But the profession is replete with those who *know* but can not *teach*. Student teaching affords an opportunity to dis-

cover whether a prospective teacher *can* teach. It may thus become one means of selecting teachers. It also gives some assurance that the prospective teacher has secured a degree of skill in teaching before being permitted to begin teaching as a profession.

The pictures on student teaching activities also emphasize the current efforts to have teachers equipped to meet the needs of modern life. Safety, in its many ramifications and aspects, is one of the most serious contemporary problems. Student teachers are learning about one phase of the problem through observing and taking notes on the Highway Safety Project. Through this experience the prospective teachers will be prepared for a more effective type of safety education when they enter upon their work of actual teaching.

The history of teacher education in North Carolina is not unlike that in other states. In general, the process has been a progressively evolutionary one. Almost without exception, the educational qualifications prerequisite to entering the teaching profession were very, very low at first, with additions and gradual

increases until the present levels in the respective states had been met. And this process is still in progress.

In North Carolina, as late as 1917 the chief agency for training teachers for the elementary school was the elementary school itself. Until that date, most teachers in the rural elementary schools had been certified by passing an examination which itself was based upon the subjects of the elementary school. Even as late as 1922 a beginning elementary teacher was required to have only two years of high school education. Today this teacher is required to have three years of college education, an addition, within fifteen years, of five years to educational qualifications of a beginning elementary teacher.

Since during these years the educational standards for entering the teaching profession were so low, it was incumbent upon

the State to give every encouragement possible to further the educational equipment of those teachers in service. The chief agencies for this work have been the summer schools and the program of extension courses from the colleges of the State. The story of teacher attendance for this work is told in tables on pages 48 and 49.

Some measure of the effectiveness of this in-service teacher education program may be seen in the table on page 50. In 1921-22 the average training of the white teacher was less than one year of college education, that is, .926 of a year, whereas in 1937-38 the average training was almost four years of college education, that is, 3.71 years. Similarly for those years the average training of the Negro teacher was 3.51 years of high school work in 1921-22 and 3.12 years of college work in 1937-38. This is really a remarkable story.

The table relating to the salaries of teachers reflects rather graphically the effects of economic conditions of recent years upon the economic well-being of the teacher. For the white teachers there was a decrease of 34.9 per cent from the high peak to the low point, and for the Negro teachers a decrease of 26.8 per cent from the highest average annual salary in 1930-31 to the low point in 1933-34. It is encouraging to note, however, that a gradual restoration of salaries is in progress. At least three elements enter into this upward trend in salaries: (1) partial restoration of the basic salary schedule, (2) longer school terms and (3) increased scholarship of the teachers.

During the years of the depression not only did teachers receive drastic reductions in salaries but they also taught more pupils. Beginning with 1931-32 the number of pupils per teacher—the basis for teacher allotment—was substantially increased. For white teachers in 1930-31, the year prior, the average daily attendance of pupils per teacher was 28.1, while in 1931-32 it was 31.6. For Negro teachers during the same years, the number was 32.6 in 1930-31 and 34.9 in 1931-32. This increased teacher load is still operative. It will be observed, moreover, that the number of pupils per teacher in the elementary school is greater than the number for the high school teacher. Two questions may be asked: What should be the optimum number of pupils per teacher? Should the elementary or the high school teacher have the larger number of pupils?

* Decrease due to elimination of duplicates beginning this year.

THE PUPILS

All children in North Carolina between the ages of six and twenty-one are entitled under the Constitution to attend the public schools. Those between seven and thirteen years of age, inclusive, are required to attend for the term the school operates.

The census indicates that there are more than a million children of school age. There

were actually 882,006 pupils enrolled in public elementary and secondary schools during the year 1936-37. Those children on the census not accounted for in the public schools were attending higher institutions, private schools or had left school for employment or other reasons.

It will be noted from the accompanying table that the public school enrollment for the past several years tends to decrease. But it will be further noted from the other table appearing on this page that school attendance is improving from year to year.

While almost all North Carolina boys and girls now attend schools which operate for at least an eight months' term, this has not always been the case. For the school year 1929-30, as the accompanying table shows, 106,464 white children were enrolled in schools having terms of less than eight months.

Per Cent Enrollment in Attendance

YEAR	WHITE	NEGRO	TOTAL
1919-20	70.4	64.2	68.5
1924-25	76.3	67.6	73.6
1929-30	80.1	71.7	77.6
1930-31	84.9	75.6	82.1
1931-32	86.2	79.5	84.1
1932-33	86.5	80.1	84.5
1933-34	85.8	81.8	84.5

1935-36	87.0	81.9	85.5
1936-37	88.3	82.3	86.5

The General Assembly of 1933 provided for the operation of all schools for a minimum of eight months unless poor attendance made it advisable to operate a shorter term. The same law eliminated all local taxes for the extension of the school term beyond eight months except upon the vote of the qualified voters in the administrative unit.

The table presented indicates the shift in enrollment from the "less than 8 months" and "9 months" columns to the "8 months" columns, as a result of this legislation.

Since 1933-34 there has been some decrease in the number of pupils enrolled in "8 months" schools and a corresponding increase, due to the voting of local taxes, in "9 months" schools.

The distribution of school children among the grades, due to longer school terms, better trained teachers and other improved teaching situations, is much better today than it was ten years ago. The number of pupils in the first grade, as the accompanying table shows, has decreased considerably, and the number of pupils in the higher grades is much higher than was the case a decade earlier.

These statistics indicate that the school children of today are taking advantage of the better opportunities provided by State and local funds.

THE PROGRAM

Perhaps the most significant changes in the public schools of the State in recent years have been made in the instructional program. Traditionally, the schools have offered a program devised to prepare students for college. Today, however, the great majority of boys and girls never go to college. Many educators, therefore, have modified their programs to meet the needs of boys and girls whose formal education is terminated in the public school. Teaching the three R's is no longer the only responsibility of the teacher. The school program has been expanded to include the vocational and cultural subjects and to provide opportunities for child development along many lines. A renewed emphasis is placed on the individual, and he is given an opportunity to learn by doing. The materials of instruction are organized into large units of work wherein integration is stressed and pupils are encouraged to participate. The entire school program is concerned with the total personality of the child and has the following major aims: sound health; worthy home membership; mastery of the tools, techniques, and spirit of learning; faithful citizenship; vocational effectiveness; wise use of leisure; and ethical character.

*"Learn to read . . . : all other graces
Will follow in their proper places."—WALKER.*

Language Arts

The curricular program does not neglect the traditional subjects, but seeks a purposeful, meaningful use of them in experiences which involve all fields of learning. Most potent tools in the learning process are the language arts: reading, language, spelling, and handwriting in the elementary school and English in the high school. The elementary schools offer a full seven-year course of study in the language arts, and high school students are required to take four years of English.

To be understood and to understand is one of man's chief concerns. Special emphasis is placed on language usage in all grades and each lesson is in a real sense a language lesson. To motivate drill and to encourage creative language work such devices as the school newspaper, commercial periodicals, and the radio are brought into play in the classroom. Provisions are also made for discussion of current events, debating, extemporaneous speaking, and dramatization. Recent testing programs have shown that the language arts program is effective, the achievement score of the average seventh grade graduate being approximately one-half year above the national average.

Foreign Language

Every high school provides an opportunity for pupils to take at least one foreign language, and the larger schools offer two or three foreign languages. The percentage of pupils taking Latin has steadily declined, but the percentage who study French has remained almost constant for the last ten years. German has re-appeared in the curriculum of a few schools and several offer courses in Spanish.

The tendency in schools which offer Latin is to confine the work to a two-year course as is indicated by the enrollments in this subject. In the larger high schools there is a feeling that a third year of French should be offered, though enrollments in third year French for the session 1937-38 were small.

Mathematics

The combination of one-half year of Arithmetic and a half year of Algebra in the eighth grade has been replaced by a course in General Mathematics. This is followed by a second year of General Mathematics or a full year of Algebra in the ninth grade. Plane Geometry is given as an elective in the tenth grade and enrolls about 11 per cent of the total number of high school pupils. The larger high schools offer a course in Advanced Algebra designed primarily as preparation for college work and city schools offer elective courses in Solid Geometry and Trigonometry.

Social Studies

The modern school curriculum is based on the interpretation of education as life itself, rather than a preparation for life; therefore, all school experiences are concerned with the improvement of life for the individual and the group. In keeping with this philosophy, the curriculum of the public school today is much broader and much more inclusive than that in vogue a generation ago. The demands of a complex, modern

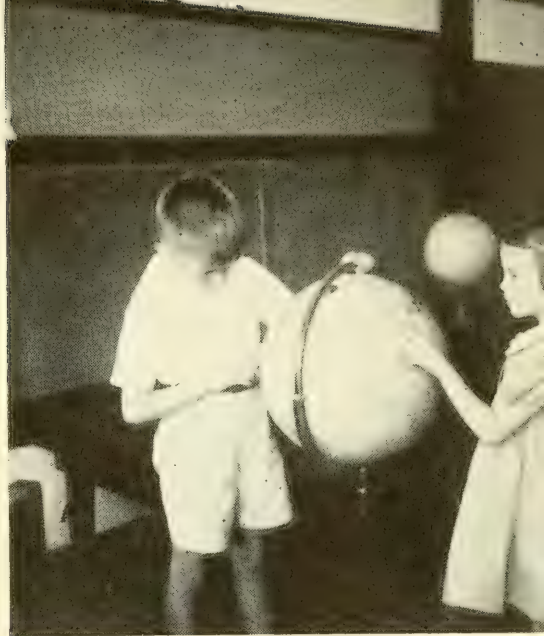

civilization have placed a new emphasis on those studies which deal with the evolution of a changing civilization and the interpretation of modern life in terms of the past.

In order that youth may find their place in contemporary life it is necessary that they have a background of information concerning man's struggle to adapt himself to his environment. This background is essential if they are to think intelligently about problems confronting them in making a living, participating in government, and enjoying the cultural advantages of their time.

*Junior Red Cross activities foster international good will.
Here an album is prepared for children in Czechoslovakia.*

*Geography contributes to
World understanding*

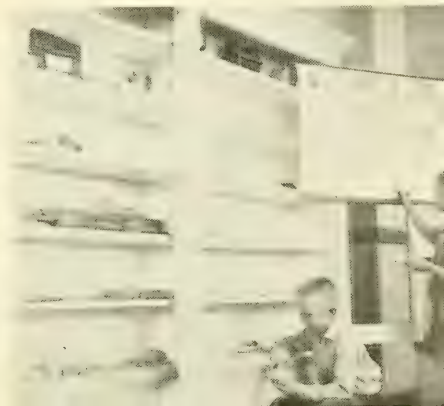

These studies in the public schools are commonly referred to as the Social Studies: History, Economics, Government or Politics, Sociology, Geography, Anthropology, Psychology, and Philosophy.

In the elementary school little attempt is made to segregate any one subject in the social studies and to offer highly specialized training in it. In contrast to this type of instruction children are guided through a series of experiences and activities which involve learning from many fields. For example, the study of North Carolina as a center of interest includes study of the history of the State, its geographical backgrounds and implications, its economic, political, and social life, and an appreciation and enjoyment of the culture of its citizenship. The teacher in this sort of learning situation is more interested in having the

Indian relics awaken an interest in early American History.

*The ultimate goal of public
education is good citizenship.*

pupil gain clear concepts than in having him memorize numerous unrelated facts—she seeks integration and use of facts in preference to mere retention. For these reasons the large unit method of instruction has steadily gained favor with teachers. The advantages of this method are easily recognized when one considers the possibilities for vitalizing the social studies and relating them to the lives of boys and girls.

In the secondary school more specialized training is offered in the social studies, but the objectives are very much the same as those of the elementary school. In general they are as follows:

1. An understanding of the present social order.
2. Development of a new philosophy of life through a spirit of tolerance and open-mindedness and a sympathetic understanding of races, movements, and institutions.
3. Development of the habit of basing action on critical judgment rather than upon fear, force, superstition, tradition, and propaganda.
4. Development of a sense of the continuity and growth of human society.
5. Development of techniques of intelligent thinking and scientific investigation which are peculiar to the social studies.
6. Development of a sense of interdependence of life and of the inter-relationship between human life and natural environment.
7. Recognition of the fact that adaptability and the capacity to conform to and to assist in change are requisites for the survival, progress, usefulness, and happiness of an individual or group.

*Attractive Surroundings stimulate individual work
in the Social Sciences*

*Cooperation is encouraged through group work during the activity period.
Each child is free to express himself creatively.*

8. Preparation of every individual for the willing discharge of his obligations in society and the maximum enjoyment of the rights, privileges, and cultural benefits from worthy participation therein.

Social studies required in the high school are Citizenship and American History. Most schools offer the following electives: World History, Ancient History, Modern History, Geography, Economics, Sociology, and Problems in American Democracy.

Throughout the public school emphasis is laid on character education, citizenship, and guidance. While little formal, direct teaching is done in these subjects, there is much indirect, informal instruction which encourages these phases of child development.

The modern school is a laboratory wherein children work and grow. Instead of merely reading about citizenship, children are guided in activities wherein they have opportunities to practice good citizenship and to grow socially as well as intellectually. The school is interested in the pupil's character development for the full twenty-four hours of the day and coordinates the work of the classroom with all community agencies such as the home, church, press, radio, cinema, parks, and civic clubs.

The ever-increasing amount of leisure which a machine age makes possible has resulted in new demands upon the school. Provision for training and guidance in leisure time activities has become a necessity and schools are meeting this problem with more cultural and recreational activities which can be carried on in adult life.

During the past biennium a keen interest has been awakened in the possibilities of more effective pupil guidance. The problem has been considered from all angles, personal, social, avocational, and vocational. A series of five State-wide vocational guidance forums was held, which has prepared the ground for more effective work along this line in the future.

In keeping with special legislation and the major aims of education, schools give special instruction in thrift and the subject of alcoholism and narcotism. This special instruction is integrated with regular classroom work and is a definite part of a program which looks to a well-rounded development of the whole child.

When children are interested in their work, the problem of discipline disappears. Through large units of study all the subjects of the curriculum are integrated.

In the elementary school the study of natural science is approached through the child's own experiences. The illustration shows plants growing in the classroom and children caring for pets.

Natural Science

The curriculum in natural science proposes to help the child scientifically answer for himself his ever increasing questions of the environment about him. Factual science information takes its place in the interests of children equal to if not surpassing his interest in the imaginative and play form of things. The world promises today to be an ever greater scientific world. A continuous unified program of work is therefore needed to fill that place in the child's life which helps him to better understand some of nature's processes; to help him know how these processes may be his limitations; and to know how these processes may be better developed to serve man's purposes. A science program functioning in the lives of individuals will give accurate satisfaction to the child's curiosity of the things about him. It will help him appreciate more fully the

world of nature.*

natural beauty in the world and stimulate an ever growing interest in interpreting nature's conditions and resources.

Instruction in grades one through eleven maintains in the forefront certain large scientific understandings as fundamental to the child. Space, time, change, adaptation, interrelationship and variety are considered and introduced in the form of themes and problems challenging to the child. Problems selected for study in the elementary and high school offer variety in purpose. Some deal with the development of scientific attitudes; some are included because of their function in establishing health, economy, and safety in private and public life; others are those that are considered essential to the interpretation of the facts of nature. The program of work has a suggested list of topics, tentative in grade placement, selected because the principle contained is true in wide interpretation—such as, “all living things need air, water and sunshine”; “change of season affects everything in nature”, or “the earth is constantly changing.”

*The Washington Field Museum—
an outgrowth of the high school natural science program,
which has received national recognition.*

*The classroom museum
helps bring reality
into the classroom.*

Activities in problem solution furnish real life situations for practice in the use of educational tools and skills. The work involves accurate recording, keeping records, noting changes and reasons for changes, collecting natural specimens, reporting accurately observations, reading for information, relating experiences, establishing museums, and constructing experiment apparatus. Classrooms should show in exhibits these interests of boys and girls. The collecting of a specimen, however, or the detailed information in its record may end with little science growth or enthusiasm for more facts about it unless the activity shows itself a part of a large problem. The description of a bird may well be used when it is a part of the study of migration. Careful attention is given to what is done to vitalize teaching. Animals in a room, an aquarium, rock and soil collections, or growing plants may not constitute science teaching. Science is evolved when there is interpretation in terms of universal principles.

*The general science course offers a broad exploratory
course experience in the field of science.*

Collecting, mounting and preserving natural specimens are activities carried on in the nature study program.

In particular, the aim of high school science should contribute to the cardinal principles of secondary education—health, worthy home membership, vocation, citizenship, worthy use of leisure and ethical character. The continuous growth of the pupils in scientific attitudes, the development of individual projects and problems, in methods of procedures and application of scientific findings is noted in the higher grades. Classroom work consists largely of discussions, reports from readings, carrying on of experiments, and making summaries of laboratory work. There the pupil has an opportunity to directly apply knowledge gained to himself and to common life problems. Well planned and prepared field trips, excursions, museum study and other like activities are encouraged to study living organisms in their natural environment.

Effort is made throughout the grades to maintain a balance in the unit themes of the program—that the pupils may in a modified form draw upon several fields of science—biology, physics, geology, chemistry, or astronomy—taking therein those problems which his interests and maturity will allow him to pursue.

Many of the mysteries of life are explained in the physics laboratory.

Health and Physical Education

A complete program of physical and health education generally includes:

1. Health service
2. Health supervision
3. Health instruction
4. Physical education
5. Safety education

Health and Physical Education H. S. Enrollments—1937-38

SUBJECT	WHITE	NEGRO	TOTAL
Health & Physical Ed.	6,121	87	6,208
Red Cross Course	57	57
Safety	60	60

Health service, as the term implies, includes the many phases of school life which serve to promote the health of pupils, teachers, and others connected with the school. Of prime importance in the school health program is the early recognition and correction of remedial defects. In a majority of elementary schools pre-school clinics are held each spring for the purpose of examining children who will enter school for the first time the following fall. The school faculty, parent-teacher association, county health officer, and local doctors cooperate to make this day a success.

Early recognition and correction of remedial defects promotes physical and educational growth.

Examination of vital organs and measurement of bodily growth are important features of the pre-school clinic.

Children attending the clinic are given physical examinations and free vaccinations when requested. When remedial defects such as poor eyesight, defective hearing, enlarged or diseased tonsils, tooth decay, malnutrition, and faulty posture are discovered, parents are advised of conditions and urged to take their children to the family doctor for advice and correction before the child enters school in the fall.

In connection with the pre-school clinic schools usually have what is called a "Beginner's Day Program." This program is designed to create in the child a desire to attend school and to remove any fear of school that he may have. First grade teachers and children usually present this program and entertain the beginners and show them what the modern school is like. As parents usually attend with the pre-school children this day serves to interest patrons in the school and to bring about closer cooperation between home and school for the good of the child.

The work of the school nurse is another of the many school health services. There are 206 county health nurses and eight special nurses who do part-time work in the schools of 76 counties. Several of the large cities have full-time school nurses in addition to those included in county health departments.

These splendid health workers cooperate with the teacher in discovering contagious diseases and preventing their spread. They help in weighing and measuring pupils and assist with the periodic screening examinations which are given for the purpose of checking on the physical growth and development of all pupils.

The cafeteria provides another service which in addition to furnishing wholesome lunches at a reasonable cost also acts as a special laboratory where opportunities are provided for pupils to actually learn to choose and eat balanced meals. Milk and other foods are obtained only from sources which are not contaminated and inspection and rating of sanitation is made by the county sanitation officer at regular intervals.

The theoretical knowledge taught in the classroom about proper diet and its relation to general health is made functional when the cafeteria is operated as a health service phase of the school.

Dental clinics, another health service included in the health program, reach many unfortunate children who need dental care but whose parents are unable to pay for the service.

The school nurse cooperates with the teacher in promoting the general health of the child.

The school cafeteria provides well-balanced lunches at reasonable costs.

Other health services that are included in the program of some schools are: health examinations and follow-up work for correction of defects, pre-school clinics, and immunization programs.

Health Education in its broadest sense is a responsibility of every teacher and is a by-product of every phase of school life. Schools obtaining maximum health results are emphasizing the physical, mental, social and moral aspects of health. The ideal of health is taken to mean not mere freedom from obvious deformities and pathological symptoms. It is the realization of the highest physical, mental and spiritual possibilities of the individual.

The health service programs are intended to be not only protective and corrective in nature but also educative. Through these various services health education becomes a personal and functional matter. Health becomes a way of living.

Health supervision (healthful school living) is concerned with the hygiene and sanitation of the school building, grounds, and equipment. This includes the supervision of the classrooms, corridors, lavatories, toilets, drinking fountains, water supply, and care of the grounds. It also includes supervision of the heating, ventilating, and lighting of the whole school.

The health program includes dental care.

The study of food creates interest in proper diet.

Health instruction, including safety, is a responsibility of every teacher in the school even though special classes are offered in this subject. In the elementary grades it is a part of the daily program while, for the most part, in the high school it is integrated with such subjects as physical education, science, and home economics. Leaders in health education recommend that high schools devote at least one period each week for two years to definite health and safety education.

The school stresses the functional value of education in safety and first aid.

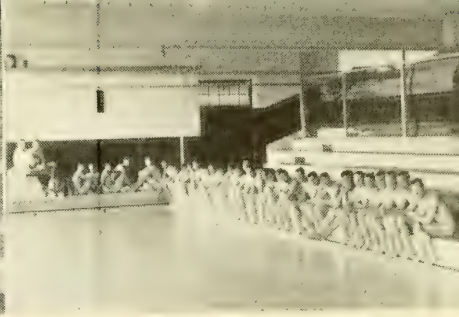

*Play is a natural part
of the child's life.*

Physical education programs in North Carolina include activities such as free play on playground equipment, softball, volleyball, basketball, baseball, soccer, tennis, rhythms and dances, track and field events, table tennis, swimming, golf, apparatus work, tumbling, self-testing stunts, and touch football. Practically every school in the State conducts some of these activities, even though an organized program of physical and health education is not offered. It is true, however, that a large majority of the high schools confine their activities to the athletic teams. Baseball, football, basketball and track are the sports that are carried on by most of the city schools. The majority of the smaller schools have only baseball and basketball. The athletic programs of most schools, however, reach less than twenty-five percent of the students. In 1937-38 eleven high schools in the State employed twenty-three full-time certified physical and health education teachers. Thirty-five schools employed forty-six teachers who devoted part of their time to regular physical education classes.

*The physical education program includes
rhythmics and folk dancing.*

Physical education develops muscular coordination and body control.

Charlotte led in the number of full-time high school teachers with seven, High Point and Durham each employed four, Salisbury, two, and Asheville, Mills Home, Greensboro, Waynesville, Henderson, Raleigh, and Lumberton each employed one full-time physical and health education teacher.

In addition to the sixty-nine schools that employ special teachers many others carry on an activity program by the regular classroom teachers during the activity period and after-school hours.

In the elementary schools that offer organized physical education activities the regular classroom teacher usually carries on this program. Principals' Annual Reports for 1937-38 indicate that approximately fifty percent of the elementary schools do have organized and classified activities for all of the pupils.

The track meet provides rigorous exercise on a competitive basis.

*In the classroom
they study
safety—*

Safety education is accepted as a responsibility of the schools to combat the increasing rate of accidents. Statistics compiled by the National Safety Council show that, while the percentage of accidents for adults and people over fourteen years of age has increased, the percentage for children of elementary age has shown a large decrease. This is a recognized result of the fine safety education carried on in our elementary schools.

Many high schools carry on safety programs as an extra-curricular activity, while there are a few schools that have special courses. The general trend has been to combine safety education as a part of the health and physical education program. This makes for economy and efficiency in the administration of the program and at the same time combines related subjects in such a manner as to provide opportunities for better instruction.

In keeping with present educational requirements the school safety programs are being developed as a functional program closely related to everyday experiences, interests, and needs of North Carolina children. The programs are built around the eight main phases of safety education: home, school, street, out-of-doors, vacation and seasonal safety, fire prevention, and first aid.

—To and from school they practice it.

Art

Opportunity for creative expression is the right of every child. At one time creative powers were thought to exist in only a few people. Acceptable trends are now that every one should be

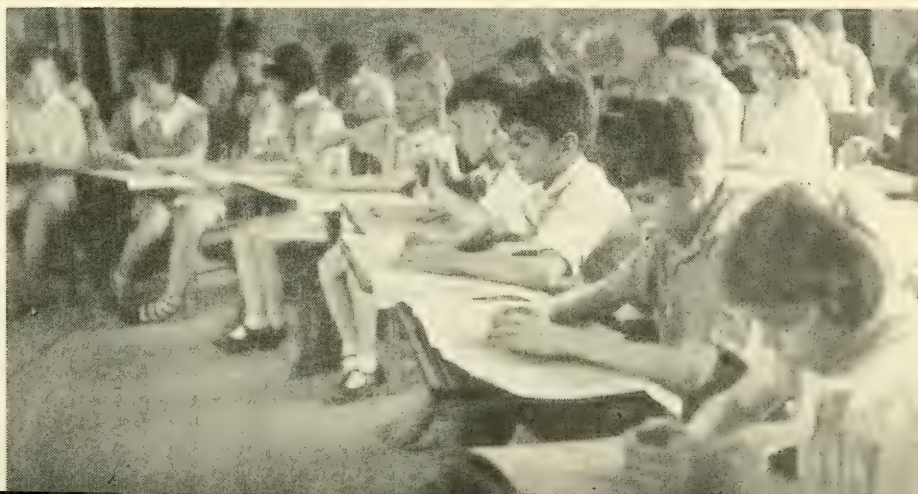

privileged and encouraged to take part in a variety of expressive forms. This satisfaction to creative impulses may perfect itself through many media provided in the elementary and high school—paint, clay, crayon, charcoal, construction materials, ink, pencil or chalk. The child uses these materials to help him vivify an idea, to clarify a thought, to factually represent an event or to play with imaginative design. The useful side of art has a place from the beginner's chart to drama in the higher grades. Activities in the simplest daily contacts with material objects should show recognition of line, form, color, proportion, balance, rhythm, and repetition. It is especially desirable that the pupil shall apply these principles in his most immediate choices, as in his clothing and home decoration.

Appreciation for notable examples of art works is encouraged. Children love pictures. Long before reading powers are developed they read mingled emotions into line and space forms. The program proposes to meet this desire by the presentation of seventy or more prints from grades one through seven—this list to be selected by the schools from a large number of masterprints.

*The art class provides opportunity for the child
to express himself creatively.*

Art and literature meet in the puppet show.

"Another side of art in the elementary school is the doing of things 'just for fun' ", says Jessie M. Todd. Through representation the child draws upon a number of the major art expressions. He sees and feels art as directly a part of the theatre, costume, sculpture, architecture, drawing and painting, graphic arts and art in industry. By studying and collecting fine prints, casts, statuary, pottery, glass, china, wood-carving, iron-works, brass, and antiques much of the tastes and ways of living of people may be known. Periods in history are made to relive through representation; literature becomes alive; character impersonation brings the past to life; and, through it all the language arts—spoken and written English, reading, writing and spelling—are developed in a way meaningful and joyful to the child.

Increasing numbers of schools are recognizing the value of art in the lives of boys and girls and are accordingly providing materials and instruction that is necessary for a most desirable program. Likewise many schools are demonstrating in the daily living of the boys and girls principles of simplicity, harmony of color scheme, pleasing arrangement, and selection of decorations acceptable in design, form and color.

High school art students express themselves in various media.

Music

The music education program in the public schools offers a wide range of musical experiences, including the informal type of learning as well as the organized forms of music instruction. The program includes (a) an outline

course in public school music, vocal and instrumental, for grades one through eleven; and (b) plans for accrediting work in applied music (piano, violin, organ, or an orchestral instrument). Supplementary bulletins to the course of study are issued at intervals as new phases of the content courses in music develop.

Free textbooks in music are furnished the elementary schools, and excellent basic and supplementary materials are provided on a rental basis for both elementary and high schools. Equipment, such as the phonograph, the radio, the piano, and the instruments of the orchestra or band, is provided locally and to the extent of the interest of the school and community.

Music H. S. Enrollments 1937-38

SUBJECT	WHITE	NEGRO	TOTAL
Band—Orchestra	1,727	1,727
Glee Clubs	1,373	1,441	2,814
Other Courses	3,168	3,168

The high school band provides training for instrumental music and helps to build school spirit and community pride.

*The toy
orchestra
broadcasts.*

In the development of the curriculum the pupils' experiences in music need not be isolated and separate from their other classroom and home experiences. It should be a part of their total experience—contributing its part to the completeness and beauty and richness of that experience and receiving support and enrichment from all other phases of learning. Therefore, classroom teachers by giving instruction in music are contributing each year to the growth and development of the music education program. Special teachers of public school music and directors and supervisors of music instruction are employed in the larger city administrative units.

Many types of programs are presented in school and community each year, thus offering opportunities for pupils to use their learnings in music. Special Days, Music Week, and Festivals, each provide a situation where large numbers of children can enjoy their musical learnings through participating in and contributing to good programs of music.

Industrial Arts

Industrial Arts subjects are recognized as an essential part of general education even though such activities may have vital relationship to vocational education.

Industrial Arts and Shop Classes H. S. Enrollments—1937-38

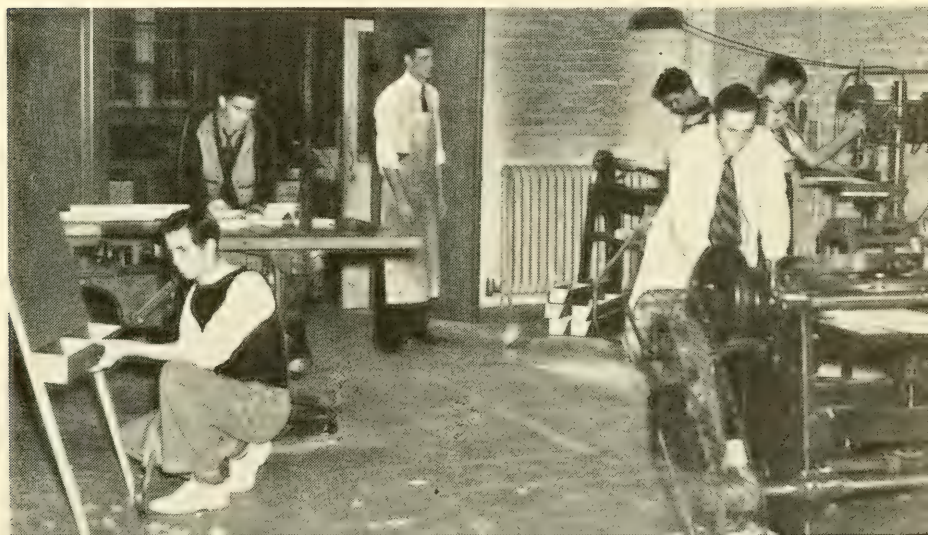

White	5,676
Negro	2,164
Total	7,840

A comprehensive course in Industrial Arts includes such subjects as art, metal work, automobile mechanics, concrete construction, electricity, general metal work, mechanical drawing, pottery, printing, sheet metal work, textiles, woodworking.

The objectives of Industrial Arts are:

1. To contribute to the general social development of the pupil.
2. To develop that mechanical handiness so useful in the home, school and play life of the child.
3. To stimulate thinking on the part of the pupil and to afford him an opportunity to put his ideas into action.
4. To encourage a wholesome attitude toward work.
5. To develop in pupils the habit of an orderly method of procedure in the performance of a task.

Besides furnishing industrial and occupational information, the industrial arts course frequently furnishes a background for specialized vocational training.

The industrial arts course is exploratory in nature, often revealing talent and interest which might remain undiscovered

6. To develop in each pupil the ability to select wisely, care for, and use properly the things he buys or uses, and cultivate an appreciation for the products of arts and industry.
7. To give helpful industrial and occupational information, and experience in those fundamental processes which will aid the student to choose his life work more wisely.
8. To serve as an introduction to vocational training.
9. To provide an opportunity to develop skills and knowledge of tool processes which contribute to the learning of a skilled trade.

Vocational Education

The providing of practical training as a part of the public school offerings has met a hearty response among the people of North Carolina, and there has been a steadily increasing demand for vocational education from the time the program was inaugurated under the authority of the Smith-Hughes Act passed by Congress in 1917.

The demands of a modern complex civilization, coupled with the difficulties unskilled workers have had in securing jobs during the past decade, has developed a decided change in public sentiment toward those types of education which aim to prepare the individual for efficient entrance into his chosen vocation. This demand for skilled workers is present in every phase of life where men work for a living.

The program of vocational education as carried on by the Division of Vocational Education provides instruction for persons who have entered upon or are preparing to enter upon the work of the farm, the factory, the home, and the commercial and distributive occupations. Not only does the program provide for the training of the normal healthy individual but through the department of vocational rehabilitation is finding, re-training and placing in positions of economic independence hundreds of North Carolina citizens, who because of accident or disease have become incapacitated for earning a living at their chosen vocations.

The program in vocational agriculture has reached more people and shown most significant results, largely because by far the largest allotment of Federal funds to the State is for agriculture and because North Carolina is still predominately a rural state. Starting with 21 schools, enrolling 323 students in 1918-19, the work has grown till in 1937-38 there were 369 teachers giving instruction in vocational agriculture to approximately 27,000 students in all-day, part-time and evening classes.

The supervised farm program is the laboratory practice of the students in vocational agriculture. They keep accurate records of farm operations, including rent of land, cost of preparation, fertilization, cultivation, and harvesting, and make a report to

The 312 white teachers of vocational agriculture who are preparing 17,000 farm boys for the business of farming.

A group of students of vocational agriculture in the classroom.

the teacher at the end of the season. From these records the state report is made up. The students' labor income on projects for 1937-38 amounted to \$1,367,809.80.

Agriculture II	4,389	999	4,388
Agriculture III & IV	4,035	481	4,516

The Young Tar Heel Farmer organization, made up of the students taking vocational agriculture, is one of the State's most potent agencies for developing leadership, self-reliance and initiative. The two camps, one at White Lake and one at Barnardsville

in Buncombe County, which are owned and operated by the Young Tar Heel Farmers, furnish camping facilities at very reasonable rates for from 4,000 to 5,000 farm boys each summer.

The farm shop, which is a part of the program of vocational agriculture, holds the interest of many boys, who might not be interested otherwise, and provides training opportunities for thousands of boys to learn to repair farm machinery, to make simple appliances for the homes, and to do many jobs around the farm that are a great saving in money.

Students of vocational agriculture repair their farm tools and machinery and make many articles useful on the farm in the farm shop.

A successful home project in vocational agriculture requires the cooperation of mother and father.

A group of Young Tar Heel Farmers in front of their chapter house.

Kitchen police duty at the Young Tar Heel Farmer's Camp at White Lake.

Home Economics Education

Home economics in the high schools of North Carolina is rapidly turning to the vocational aspect of preparation for home and family living. This broad interpretation includes instruction in home improvement, food and nutrition, child care and guidance, personal development, clothing selection, care and construction, family relationships, health and home nursing, and art as applied to homeliving.

Growth in Vocational Home Economics Departments

YEAR	DAY SCHOOLS		EVENING SCHOOLS	
	Departments	Enrollment	Number	Enrollment

ready employed through evening and part-time classes.

During recent years, with the increased demand for young people prepared for some definite vocation, and as a result of in-

Learning the machine shop trade.

Students in trade classes learn carpentry and printing.

creased Federal funds, more attention has been given to the day trade classes. In 1937-38 there were fifty-seven day trade teachers employed in the larger high schools of the State. These courses are designed to prepare boys to become advanced apprentices in machine shop, printing, the building trades, auto mechanics and textiles.

Vocational Rehabilitation

During the fiscal year just ended, 389 persons were placed upon a self supporting basis through the activities of the Department of Vocational Rehabilitation. In consideration of the fact that 128 of these have 341 persons dependent upon them for support, it is at once apparent that 730 persons have been removed from potential or actual relief status during the year. Institutional care for this number of people would have cost approximately \$200,000, which is about double the entire budget of our Rehabilitation Program for the year.

The activities of this department consist of locating, testing, giving physical restoration, where possible, vocational training and placement of the vocationally handicapped persons in the State. In order to aid in the physical restoration of these cripples the orthopaedic surgeons of the State cooperate with the department in conducting free clinics located at convenient places throughout North Carolina. Each month these clinics are held and the cripples in that area are notified to meet the surgeon for advice and treatment.

There are on the live roll 1,401 incapacitated persons, either in process of being rehabilitated or waiting for a training opportunity. This program is severely hampered by the lack of funds for maintenance of cripples while in training. There at present 200 incapacitated persons waiting for training, who could be on

their way to economic security if funds for living expenses were available.

The Federal funds for this program are appropriated in the Social Security Act. The amount allotted to North Carolina on a population basis is \$49,414.00. This has to be matched by the State to be used. Were these funds matched dollar for dollar the program could be expanded twenty-five per cent.

The average cost per person for rehabilitation is \$397.90. When we think of what it means to take these people who are deprived of the opportunity to earn a living and for this small cost per person—half of which is paid by the Federal government—convert them into happy, self-supporting citizens, it seems like a good investment of State funds.

Woman's desire and search for beauty through modern plastic surgery.

Business Education

Business education has the responsibility and the opportunity of making a maximal social contribution in a democracy. Since many business activities, business problems and business mistakes will come to all people and to the institutions and organizations in which they may participate the subject matter of Business Education should be such as will function efficiently in the life of the individual and contribute to a citizenship that is economically literate and competent in business matters.

Business Education H. S. Enrollments—1937-38			
SUBJECT	WHITE	NEGRO	TOTAL
Bookkeeping I	4,062	20	4,082
Bookkeeping II	619	22	641
Shorthand I	3,261	71	3,332
Shorthand II	1,231	41	1,272
Typewriting I	9,353	82	9,435
Typewriting II	2,556	56	2,612
General Business Training	4,906	215	5,121
Bus. Arithmetic	3,303	184	3,487
Business English	528	528
Business Law	531	531
Salesmanship	640	640
Adv. Bus. Training	380	380
Penmanship	43	43

The figures cited when compared with previous statistics indicate increased interest in Business Education training. It will be noted that the largest enrollment is in typewriting. This is due to the fact that a large number of pupils not interested in the full business curriculum have been provided an opportunity to take typewriting for personal use. Many of the departments are also emphasizing newer courses such as those in salesmanship, business correspondence and business law.

Writing in a machine age. The course in typewriting is the most popular of all the commercial studies.

Library Service

"Let's sing the praise of books."

Number of Volumes Owned		
YEAR	TOTAL VOLUMES	VOLUMES PER PUPIL
1924-25	590,273	.7
1929-30	1,218,080	1.4
1930-31	1,345,737	1.6
1931-32	1,395,267	1.6
1932-33	1,489,347	1.7
1933-34	1,564,928	1.7
1934-35	1,636,835	1.8
1935-36	1,739,223	2.0
1936-37	1,898,369	2.2

The number of volumes in the school libraries is an index to the opportunity which boys and girls have to put in to practice the skill of the first R of the school program. Their delight in the ability to find, read, and understand information in books points to an informed citizenry wherever libraries are provided.

Habits formed in school usually carry over into adult life.

The number of volumes available, however, does not necessarily mean the number of suitable books. During the past few years a conscientious effort to cull the library collections of undesirable and outmoded material has resulted in more useable collections, but the meager supply of books has necessitated the holding of many volumes which have really served their usefulness. In the State as a whole the high schools are more adequately supplied with library books than are the elementary schools. If boys and girls entering high school are to be able to interpret the printed page successfully, they must have more books for reading in the elementary grades. A satisfying library program in the grades provides a good foundation for making a thinking adult citizen.

The library is the heart of the modern school.

The expenditure for school library books, periodicals, and supplies has steadily increased in the past few years, but at an average of 29 cents per pupil for all school library purposes, other

than salaries, the amount is small. While books have been reconditioned and mended so that there is an average of 2 books per pupil in the school libraries, many of these are unsuitable and should be replaced by new and attractive books to meet the needs and interests of the pupils.

The average cost of books other than reference books for elementary grades is about one dollar a volume. In the high school the cost is a little higher. If a number of replacements including reprints of fiction are purchased, the average cost per book is about one dollar and a quarter. When the largest purchases are for scientific and historical books, the cost averages at least one dollar and a half a volume. To mend a worn book properly costs about ten cents exclusive of labor. Pockets and cards for circulation and cataloging need to be purchased. The minimum budget should be fifty cents per pupil.

Expenditures for School Libraries

(Reports from Larger Schools)

1936-37	151,884.64	17,232.57	169,117.21	.29

An abundance of books in attractive surroundings creates an atmosphere which stimulates study and recreational reading.

Many schools are very inadequately supplied with library books, and all schools feel that additional material could be used to advantage.

Large, light, airy library rooms are being provided in the new school buildings, and space is being arranged for library quarters in many older buildings. Elementary school classrooms also provide library corners for housing classroom collections or books to meet the requirements of class study on a given subject. Recreational books are also usually included in classroom collections. A variety of worthwhile reading material easily accessible promotes wise use of free time and provides mental stimulus for active minds.

In order to provide effective service definite provision must be made for housing the school library so that the books are available at all times. A separate library room is provided in most of the high schools. In many elementary schools there is a library room, in others classroom library corners have been provided. Suitable quarters of these three types are shown in this publication. The atmosphere of study and interest is apparent where suitable library rooms and books are supplied. Wide reading youths should develop into clear thinking adults.

The classroom library fosters and develops the child's love for books.

The employment of trained librarians and teacher-librarians in many of the schools has greatly increased the value of the book collections, in that a well organized library provides more opportunity for finding answers to questions which arise in the classroom work. A teacher who understands boys and girls and knows the contents

of books can prevent many disciplinary problems. When the right book and the right child get together at the right time, mental stimulation results and guidance for future growth has been effected. The librarian and teacher-librarian are the human elements in this relationship.

The effectiveness of this program is evidenced

by information regarding the use of the library. The table tells only part of the story. Statistics on the use of library show the number of times books have been taken out of the library, but do not show the use of books, pamphlets, pictures, magazines, and other materials within the library walls. The statistics do, however, show the keen interest which the boys and girls have in books. In schools in which an ample supply of books is to be found, the average circulation of books usually is not fewer than twenty per pupil. This means that the textbook material is being supplemented and that young inquiring minds are being better satisfied. In such schools the circulation of informational material and that for recreational reading are about equal. Surely, "Reading maketh a full man."

Children in ungraded classes are taught to use their hands and to develop habits of good citizenship.

Special Classes

In many communities new demands are being made upon the public school in the interest of the unsuccessful school child. To meet his peculiar needs special class work has been provided in many schools for the purpose of preventing more serious disability and for correcting faults already discovered. When the child's difficulties in learning are understood and he is placed in a small group, it is possible for the teacher to give him more individual attention, to guide him into activities which are within the scope of his abilities, and to restore his confidence and self-respect.

If North Carolina is to make further progress in education, it will be made not only through development of the normal healthy child, but also through maximum development of the possibilities of the handicapped child. Every child, regardless of his physical, mental, or social endowments should be offered the opportunity of making his best contribution to society.

The first sight-saving class in the State. A special teacher and special equipment are needed for this work.

Commencement

A new type commencement is characteristic of many schools. Progressive schools have gotten away from the stereotyped class history, prophecy and last will and testament. The new kind of commencement presents a program built around a central theme. Illustrative of this type may be a pageant on "Democracy and Youth," symbolizing the democratic ideals of today in contrast with the reality, with its various parts written and acted by the students themselves.

*25,000 strong they march forward to assume the privileges
and duties of citizenship.*

Adult Education

The Legislature of 1937 appropriated the sum of \$25,000 for a State-Aided Adult Education Program. During the session 1937-38, 98 teachers were employed and 4,544 adults were taught. The following city and county administrative units participated in this program: Anson, Buncombe, Burke, Kannapolis, Catawba, Cleveland, Durham County and Durham City, Winston-Salem, Gaston and Gastonia, Guilford, Greensboro, High Point, Jackson County, Mecklenburg, Charlotte, Moore, Orange, Richmond, Salisbury, Rutherford, Stanly, Albemarle, Surry, Swain, Tyrrell, and Union.

No great civilization has ever been nor can ever be built upon ignorance. Ignorance builds no factories, constructs neither highways nor railroads, blazes no airplane trail, founds and fosters neither worthy homes nor schools and establishes and maintains no satisfactory form of government. Ignorance is the foe of the church, the enemy of the home, the obstacle to the school, the destroyer of the state, and is at this moment the menace of civilization. What the commonwealth of North Carolina needs is not less education but more and better.

*"Tis life not death for which we pant,
More life and fuller that we want."*

SECTION I
GENERAL STATISTICS
1936-1937

TABLE I. POPULATION, MEMBERSHIP, ATTENDANCE

This table gives by race for each county (rural) and city school system of the State during 1936-1937: the school population (ages 6-21 years), the average daily membership and the average daily attendance.

The summary shows for North Carolina the population, membership and attendance figures; then gives a series of percentage calculations.

TABLE II. ENROLLMENT (a+d) BY LENGTH OF TERM

This table shows by race for the rural (county) and city school systems of the State: the number of pupils enrolled (a+d) distributed according to lengths of school term during 1936-1937.

The summary gives above items for the State, the net enrollment (duplicates excluded) and a series of percentage calculations.

TABLE IV. WHITE ENROLLMENT (Code a) BY AGE AND GRADE

This summary shows the age-grade distribution of the different white pupils enrolled (Code a) in the schools of the State during 1936-1937. The number and percentage of pupils in each grade are given. Then this number is divided to show those under-age for their grade, those of normal age and those over-age by one, two, three, four or more years. This information is presented in three sections: 1. for all white pupils, rural and city; 2. for rural white pupils; 3. for city white pupils.

TABLE V. COLORED ENROLLMENT (Code a) BY AGE AND GRADE

This summary shows the age-grade distribution of the different colored pupils enrolled (Code a) in the schools of the State during 1936-1937. The number and percentage of pupils in each grade are given; then this number is divided to show those under-age for their grade, those of normal age and those over-age by one, two, three, four or more years. As for white, there are three sections: 1. for all colored pupils, rural and city; 2. for rural colored pupils; 3. for city colored pupils.

TABLE VI. AVERAGE TERM IN DAYS

This table shows for each race and in combination the average term in days of elementary and high schools in each administrative unit of the State during 1936-1937. The calculations are based upon the figures of Table II.

The summary gives pertinent facts concerning deviations from the State-supported term of 160 days.

SUMMARY OF TABLE VI

ITEMS	Counties	Cities	North Carolina
TOTAL NUMBER UNITS.....	100	69	169
NUMBER UNITS HAVING:			
Average term of less than 160 days—			
For all pupils.....	31	1	32
For white pupils.....	9		9
For colored pupils.....	24	1	25
Average term of 160 days—			
For all pupils.....	66	37	103
For white pupils.....	88	38	126
For colored pupils.....	71	43	114
Average term of more than 160 days—			
For all pupils.....	3	31	34
For white pupils.....	3	31	34
For colored pupils.....	3	23	26
No colored pupils.....	2	2	4
NUMBER UNITS LEVYING SUPPLEMENTAL TAX.....	1	29	30

TABLE VII. ENROLLMENT, LOSSES, MEMBERSHIP BY GRADES

This tabulation—a summary of several tables—shows by grades for the State during 1936-1937: the number of different children enrolled (code a), the number of children dropping out of school or losses, the membership on last day of school and the percentage of enrollment which quit school. There is division of the figures for white and colored pupils in county (rural) and city school systems.

GRADES	White				Colored

TABLE VIII. PROPORTION OF ENROLLMENT, LOSSES, MEMBERSHIP
IN EACH GRADE

With the figures of Table VII as a basis for calculations, this tabulation shows in percentage for each grade its proportion of the net State enrollment (code a), losses and membership (last day of school) during 1936-1937.

TABLE X. PUPIL-WORK ACCOMPLISHMENT BY GRADES

This tabulation shows by grades for the State during 1936-1937: the number of pupils doing required work of full year, the number performing only a half year's work and the number accomplishing less than work of half year. The sum of these three groups equals the membership of Table VII, thus accounting for all pupils on the roll at close of school. There is division of the figures for white and colored children in county and city systems.

GRADES	White			Colored

TABLE XI. INDEX OF ACCOMPLISHMENT BY GRADES

This tabulation reduces the figures of Table X to percentages and gives an index of work accomplished in the several grades. The index is the addition of percentages weighted in accordance with quantity of work; to the proportion of pupils doing full year's work, the base of calculations, are added: 1. 50% of the percentage doing half year's work; 2. 25% of the proportion accomplishing less than half year's work. This index considers only those pupils who are on the roll at close of school; for a ratio based upon enrollment (code a) see Table XII.

TABLE XII. INDEX OF ACCOMPLISHMENT

Based upon the figures summarized in Table X, this table shows by race for each unit of the State during 1936-1937: the percentage of membership (last day of school) which did full year's work, the percentage which did half year's work, the percentage which accomplished less than work of half year and an index number combining these percentages. In the index number, as in Table XI, full credit (100%) is allowed for that proportion of pupils accomplishing work of full year; half credit (50%) is given for the percentage doing half year's work; one-fourth credit (25%) is added for the remaining proportion of pupils. The index is the sum of these three credits.

The summary groups the units of the State in accordance with their relative positions as indicated by this index number. The index attempts to measure the work accomplished during the year by pupils remaining in school; those who quit school are not considered in these calculations. An index number based upon enrollment, as are the percentages of Table XIII, would be lower than the one shown here. Separate figures are given for white and colored schools.

TABLE XIII. RELATIVE ACCOMPLISHMENT OF PUPILS BY GRADES

This tabulation reduces the net State enrollment (code a) to percentages to show for each grade: (1) the percentage dropping out of school; (2) the percentage doing full year's work; (3) the percentage doing half year's work; (4) the proportion accomplishing work of less than half year. Basic information for these percentages is given in Tables VII and X. This is an attempt to account for the holding and promoting accomplishments of the schools. Table XI considered only the children remaining in school; this calculation is based upon pupils enrolled (code a).

GRADES	White				Colored			
	Dropping Out of School	Doing Full Year's Work	Doing Half Year's Work	Doing Less than Half Year	Dropping Out of School	Doing Full Year's Work	Doing Half Year's Work	Doing Less than Half Year

	-----	661.4	749.1	685.9

TABLE XV. EXPERIENCE OF TEACHERS AND PRINCIPALS

This summary gives the experience ratings of those teachers and principals paid from Eight Months School Fund; those paid from local funds are not included. Since only 8 increments are allowed on Class A certificates, 6 on Class B, etc., the experience given is not the actual number of years taught but the number for which the State makes compensation.

EXPERIENCE RATING	100 Counties		69 Cities		North Carolina

TABLE XVI. INSTRUCTIONAL AND SUPERVISORY PERSONNEL

This table gives for each unit of the State during 1936-1937 a distribution of instructional personnel by race and function. Teachers are also divided according to sex.

The summary shows for North Carolina the number of teachers in elementary schools, the number in high schools, the number of vocational teachers, the number of principals and supervisors, the number of clerical assistants; then relates the number of teachers to number of pupils in Table I. Average daily membership and average daily attendance are both used as measures of the teaching load.

SUMMARY OF TABLE XVI

ITEMS	100 Counties	69 Cities	North Carolina

TABLE XVIII. SCHOOLHOUSES AND SCHOOL PROPERTY

This table shows by race for each county and city school system of the State during 1936-1937: the value of school property, the number of schoolhouses owned, the average value of each schoolhouse, the number of classrooms and the average number of classrooms per school. For races combined, the value of school property, total number of schoolhouses and their average value are also given for each unit.

The summary gives various items of valuation for all school systems and relates these figures to number of schoolhouses, classrooms, teachers and pupils.

SUMMARY OF TABLE XVIII

ITEMS	100 Counties	69 Cities	North Carolina
Value of all school property	\$ 60,797,110	\$ 52,060,608	\$112,857,718
Sites and buildings	53,738,101	47,154,484	100,892,585
Furniture, equipment	6,056,880	4,321,079	10,377,959
Library books	1,002,129	585,045	1,587,174
Value of white school property	55,034,168	44,701,736	99,735,904

TABLE XIX. NUMBER OF SCHOOL UNITS TAUGHT BY SIZE

This table shows by race for each county and city system of the State during 1936-1937: the number of elementary and high school units taught—classified according to number of teachers employed—and the number of union schools.

The summary gives the North Carolina total for each race with division between counties and cities. The number of separate elementary and high schools, as distinguished from union schools, also appears.

SUMMARY OF TABLE XIX

ITEMS	100 Counties	69 Cities	North Carolina
WHITE SCHOOL UNITS TAUGHT.....	2,344	360	2,704
Elementary schools.....	1,699	268	1,967
One teacher.....	367	5	372
Two-three teachers.....	390	17	407
Four-six teachers.....	306	32	338
Seven-nine teachers.....	331	62	393
Ten-fourteen teachers.....	220	84	304
Fifteen or more teachers.....	85	68	153
High schools.....	645	92	737

TABLE XX. STANDARDIZATION OF SCHOOLS

This summary shows by race for all elementary and high schools of the State during 1936-1937: the total number of schools taught, the number large enough to be standardized, the number of standard schools, the relationship between these items, total enrollment (a+d) in all units, enrollment (a+d) in standard schools and the percentage of children having opportunity to attend standardized schools.

ITEMS	100 Counties	69 Cities	North Carolina
WHITE SCHOOL UNITS:			
Elementary—			
Total number taught.....	1,699	268	1,967
Possible standard—7 or more teachers.....	636	214	850
Percentage large enough to become standard.....	37.4	80.6	43.2
Number standard schools.....	380	181	561
Percentage of total schools standardized.....	22.4	67.5	28.5
Percentage of larger schools standardized.....	59.7	84.6	66.0
Total enrollment (a+d).....	365,913	121,163	487,076
Enrollment in standard schools.....	166,163	95,770	261,933
Percentage in standard schools.....	45.4	79.0	53.8
High—			
Total number taught.....	645	92	737
Possible standard—3 or more teachers.....	610	89	699
Percentage large enough to become standard.....	94.6	96.7	94.9
Number standard schools.....	610	90	700
Percentage of total schools standardized.....	94.6	97.8	95.0
Percentage of larger schools standardized.....	100.0	*101.1	*100.1
Total enrollment (a+d).....	97,884	45,826	143,710
Enrollment in standard schools.....	95,971	45,738	141,709
Percentage in standard schools.....	98.0	99.8	98.6
COLORED SCHOOL UNITS:			
Elementary—			
Total number taught.....	2,019	204	2,223
Possible standard—7 or more teachers.....	55	89	144
Percentage large enough to become standard.....	2.7	43.6	6.5
Number standard schools.....	5	23	28
Percentage of total schools standardized.....	.2	11.3	1.3
Percentage of larger schools standardized.....	9.1	25.8	19.4
Total enrollment (a+d).....	177,228	60,926	238,154
Enrollment in standard schools.....	1,756	14,232	15,988
Percentage in standard schools.....	1.0	23.3	6.7
High—			
Total number taught.....	147	62	209
Possible standard—3 or more teachers.....	93	52	145
Percentage large enough to become standard.....	63.3	83.9	69.4
Number standard schools.....	80	50	130
Percentage of total schools standardized.....	54.4	80.7	62.2
Percentage of larger schools standardized.....	86.0	96.1	89.7
Total enrollment (a+d).....	16,826	15,023	31,849
Enrollment in standard schools.....	13,408	14,764	28,172
Percentage in standard schools.....	79.7	98.3	88.5

*Some schools standardized with two teachers plus principal.

TABLE XXI. DISTRICTS, BUILDINGS AND UNITS TAUGHT IN COUNTY SYSTEMS

This table shows for each county (rural) system of the State during 1936-1937: the number of administrative or supervisory districts, the number of districts levying tax for bonds, the number of buildings owned, and the number of units taught.

COUNTIES	Number Administrative Districts		Number Bond-tax Districts	Number of Buildings Owned		Number of School Units Taught			
						White		Colored

TABLE XXIII. TRANSPORTATION OF PUPILS

This table gives information for those units—mostly counties—which transported children to and from school during 1936-1937. The transportation to city units which was paid for by the county is shown here as rural except where term exceeded 160 days.

Units	White							Colored								
	No. Trucks and Other Vehicles Used	No. Schools to Which Pupils Transported	Average Number Pupils Transported Daily	Total Daily Mileage of All Vehicles	Average Number Days Vehicles Operated	Operating Cost 1936-37	Year's Cost per Pupil Transported	Daily Cost per Pupil Transported	No. Trucks and Other Vehicles Used	No. Schools to Which Pupils Transported	Average Number Pupils Transported Daily	Total Daily Mileage of All Vehicles	Average Number Days Vehicles Operated	Operating Cost 1936-37	Year's Cost per Pupil Transported	Daily Cost per Pupil Transported

TABLE XXIV. SCHOOL LIBRARIES

This summary gives by race for the combined county and city systems of the State during 1936-1937: the number of libraries in elementary and high schools; the total number of libraries; the number of volumes in these libraries; their estimated value; the amount expended for library maintenance (Current Expense) and for purchase of new books (Capital Outlay). At bottom of page is a comparison of the number of books in school libraries during the past ten years.

ITEMS	100 Counties	69 Cities	North Carolina

1933-1934.....	1,063,531	*501,397	1,564,928
1934-1935.....	1,107,816	529,019	1,636,835
1935-1936.....	1,168,049	571,174	1,739,223
1936-1937.....	1,254,545	643,824	1,898,369

*The apparent decrease for cities is due to change of territory for administrative purposes. In 1932-1933 there were 93 cities and towns operating as units of administration; in 1933-1934 these were reduced to 67, the 26 smaller towns being transferred to county systems. In 1936-1937 the number of city administrative units had increased to 69.

TABLE XXV. TEXTBOOK INFORMATION

This table shows a record of the textbook transactions with the units using the State textbook rental system at the close of the school year 1936-1937. This information was compiled from the final reports of the superintendents. Units for which no data are shown did not use the State rental plan.

TABLE VII. EXPENDITURES FOR GENERAL CONTROL

This summary shows administrative costs (except State) for all public elementary and secondary schools of North Carolina during 1936-1937 and reduces to an average annual basis the amounts paid superintendents and their clerical assistants.

Average salaries were determined by a division of the amounts paid (codes 611, 613, and 627-1) by the number of people employed, as shown on Table XVI of Section I.

A separation of administrative costs between white and colored schools—also shown—was pro-rated upon the basis of enrollment (a+d) in the several units.

Expenditures for State administration—not given here—are set forth in Table XVI of Section III.

ITEMS	Code	100 Counties	69 Cities	North Carolina
EXPENDITURES:				
Salaries of superintendents.....	611	\$ 239,461.71	\$ 173,273.23	\$ 412,734.94
Travel of superintendents.....	612	38,090.47	13,280.40	51,370.87
Salaries of clerical assistants.....	613	129,047.19	66,235.21	195,282.40
Office expense.....	614	32,762.89	19,770.11	52,533.00
Total—Superintendents' offices.....		\$ 439,362.26	\$ 272,558.95	\$ 711,921.21
Boards of education—per diem, travel.....	615	26,221.30	622.39	26,843.69

TABLES VIII AND IX. EXPENDITURES FOR INSTRUCTIONAL SERVICE

These two tables give by race for each county and city school system of the State during 1936-1937: the salaries paid teachers in elementary schools, salaries paid teachers in high schools, salaries paid principals and supervisors, the cost of supplies, of vocational education and of all other items of instructional service. Table VIII is devoted to the cost of instruction in elementary schools; Table IX gives information as to instructional costs in secondary schools.

The summary of the two tables shows by race the average annual salaries paid teachers and principals. The procedure was division of salary costs, as set forth in these tables, by the personnel employed, as shown in Table XVI of Section I. Since the cost of vocational education is coded separately (626), all vocational teachers were deducted from the total of Table XVI before computing the averages. Expenditures for vocational education (626) are reduced to a per-teacher basis—denominated average cost, which includes salaries and all other items of expense in this field.

SUMMARY OF TABLES VIII AND IX

ITEMS	100 Counties	69 Cities	North Carolina
AVERAGE ANNUAL SALARIES:

TABLE XVI. COUNTY TAX RATES

This table shows by counties the tax rate levied during 1936-1937 for schools, for purposes other than schools and for all purposes; then gives the proportion which went for schools. Taxes levied by districts (rural or city) are not considered.

COUNTIES	For Schools				Other Than Schools	Total Rate	Percentage for Schools
	Current Expense	Capital Outlay	Debt Service	Total			
Alamance.....	\$.095	\$.048	\$.16	\$.303	\$.647	\$.95	31.9

North Carolina Unweighted Average.....	.058	.058	.208	.324	.847	1.171	27.7
Weighted Average*.....	.049	.051	.189	.289	.631	.92	31.4

*The unweighted average is the sum of tax rates divided by 100, the number of counties. The weighted average takes assessed valuations into consideration and reduces the actual yields to one rate which if levied uniformly over the State would produce the same amount. The difference between the two proportions for schools, according to these two methods of calculation, is hardly large enough to be significant.

TABLE XVII. PROPORTION OF COUNTY TAX RATES FOR SCHOOLS

This table shows by counties for a six year period—1931 to 1937—the proportion of taxes levied which went to support schools. The double lines divide the years into legislative bienniums. For 1931-1933 there was a \$.15 State levy for schools.

The summary gives an unweighted average of all taxes levied during above years for schools, for other purposes and the unweighted proportion which went to schools. Calculations have shown that the difference between a weighted and the unweighted percentage for schools is not large enough to be significant.

SUMMARY OF TABLE XVII

YEARS	Tax Rate for Schools	Other Than Schools	Total Rate	Percentage for Schools
1931-1932	\$.408	\$.68	\$ 1.088	37.5
1932-1933	.414	.669	1.083	38.2
1933-1934	.265	.834	1.099	24.1
1934-1935	.298	.804	1.102	27.0
1935-1936	.319	.828	1.147	27.8
1936-1937	.324	.847	1.171	27.7

TABLE XVIII. CITY TAX RATES

This table shows for 69 cities of the State—those operating as school administrative units, arranged alphabetically by counties—the tax rates levied during 1936-1937 for schools, for purposes other than schools and for all purposes; then gives the proportion which went for schools. Taxes levied by the counties (see Table XVI) are additional to these.

SECTION I
GENERAL STATISTICS
1937-1938

TABLE I. POPULATION, MEMBERSHIP, ATTENDANCE

This table shows by race for each county (rural) and city school system of the State during 1937-1938: the school population (ages 6-21 years), the average daily membership and the average daily attendance.

The summary gives the population, membership and attendance figures for all North Carolina schools. There is also a series of percentage calculations.

SUMMARY OF TABLE I

ITEMS	100 Counties	69 Cities	North Carolina
SCHOOL POPULATION.....	805,331	305,224	1,110,555
White.....	559,720	207,894	767,614
Colored.....	245,611	97,330	342,941

TABLE II. ENROLLMENT (a+d+e) BY LENGTH OF TERM

This table shows by race for each rural (county) and city school system of the State during 1937-1938: the number of pupils enrolled (a+d+e) distributed according to length of school term.

The summary gives above items for the State, the net enrollment (duplicates excluded) and a series of percentage calculations.

TABLE IV. WHITE ENROLLMENT (a+e) BY AGE AND GRADE

This summary shows the age-grade distribution of all different white pupils enrolled (a+e) in the schools of the State during 1937-1938. The number and percentage of pupils in each grade are given. Then this number is divided to show: those under age for their grade, those of normal age, and those over-age by one, two, three, four or more years. This information is presented in three sections: (1) for all white pupils, rural and city; (2) for rural white pupils; (3) for city white pupils.

TABLE VI. AVERAGE TERM IN DAYS

This table shows for each race and in combination the average term in days of elementary and high schools in each administrative unit of the State during 1937-1938. The calculations are based upon the figures of Table II.

The summary gives pertinent facts concerning deviations from the State-supported term of 160 days.

SUMMARY OF TABLE VI

ITEMS	Counties	Cities	North Carolina
TOTAL NUMBER UNITS.....	100	69	169
NUMBER UNITS HAVING:			
Average term of less than 160 days—			
For all pupils.....	21	1	22
For white pupils.....	6		6
For colored pupils.....	20	1	21
Average term of 160 days—			
For all pupils.....	74	30	104
For white pupils.....	88	31	119
For colored pupils.....	74	34	108
Average term of more than 160 days—			
For all pupils.....	5	38	43
For white pupils.....	6	38	44
For colored pupils.....	4	32	36
No colored pupils.....	2	2	4
NUMBER UNITS LEVYING SUPPLEMENTAL TAX.....	2	36	38

TABLE VII. ENROLLMENT, LOSSES, MEMBERSHIP BY GRADES

This tabulation—a summary of several tables—shows by grades for the State during 1937-1938: the number of different children enrolled (a+e), the number of children dropping out of school or losses, the membership on last day of school and the percentage of enrollment which quit school. There is division of the figures for white and colored pupils in county (rural) and city school systems.

GRADES	White				Colored			
	Enrollment (a+e)	Losses	Membership (Last Day)	% of Enrollment Lost	Enrollment (a+e)	Losses	Membership (Last Day)	% of Enrollment Lost

TABLE X. PUPIL-WORK ACCOMPLISHMENT BY GRADES

This tabulation shows by grades for the State during 1937-1938: the number of pupils doing required work of full year, the number performing only a half year's work, and the number accomplishing less than work of half year. The sum of these three groups equals the membership of Table VII, thus accounting for all pupils on the roll at close of school. There is division of the figures for white and colored children in county and city systems.

GRADES	White			Colored		
	Number Pupils Doing			Number Pupils Doing

TABLE XI. INDEX OF ACCOMPLISHMENT BY GRADES

This tabulation reduces the figures of Table X to percentages and gives an index of work accomplished in the several grades. The index is the addition of percentages weighted in accordance with quantity of work; to the proportion of pupils doing full year's work, the base of calculations, are added: (1) 50% of the percentage doing half year's work, (2) 25% of the proportion accomplishing less than half year's work. This index considers only those pupils who are on the roll at close of school; for a ratio based upon enrollment (a+e) see Table XIII.

GRADES	White			Index	Colored			Index
	% of Membership Doing Full Year's Work	% of Membership Doing Half Year's Work	% of Membership Doing Less Than Half Year's Work		% of Membership Doing Full Year's Work	% of Membership Doing Half Year's Work	% of Membership Doing Less Than Half Year's Work

TABLE XII. INDEX OF ACCOMPLISHMENT

Based upon the figures of Table X, this table shows by race for each unit of the State during 1937-1938: the percentage of membership (last day of school) which did full year's work, the percentage which did half year's work, the percentage which accomplished less than work of half year and an index number combining these percentages. In the index number, as in Table XI, full credit (100%) is allowed for that proportion of pupils accomplishing work of full year; half credit (50%) is given for the percentage doing half year's work; one-fourth credit (25%) is added for the remaining proportion of pupils. The index is the sum of these three credits.

The summary groups the units of the State in accordance with their relative positions as indicated by this index number. The index attempts to measure the work accomplished during the year by pupils remaining in school; those who quit school are not considered in these calculations. An index number based upon enrollment, as are the percentages of Table XIII, would be lower than the one shown here. Separate grouping of units is made for white and colored schools.

TABLE XIII RELATIVE ACCOMPLISHMENT OF PUPILS BY GRADES

This tabulation reduces the net State enrollment (a+e) to percentages, showing for each grade during 1937-1938: (1) the percentage dropping out of school; (2) the percentage doing full year's work; (3) the percentage doing half year's work; (4) the proportion accomplishing work of less than half year. Basic information for these percentages is given in Tables VII and X. This is an attempt to measure the holding and promoting accomplishments of the schools. Table XI considered only the children remaining in school; this calculation is based upon pupils enrolled (a+e).

GRADES	White Percentage of Enrollment				Colored Percentage of Enrollment			
	Dropping Out of School	Doing Full Year's Work	Doing Half Year's Work	Doing Less than Half Year	Dropping Out of School	Doing Full Year's Work	Doing Half Year's Work	Doing Less than Half Year

INDEX OF TRAINING*		744.7	782.0	754.6
White.....		764.5	789.2	770.9
Colored.....		691.9	764.9	712.6

*In this index, 800 is the maximum; that is, if all teachers held Class A certificates, the index figure would be 800.

TABLE XV. EXPERIENCE OF TEACHERS AND PRINCIPALS

This summary gives for 1937-1938 the experience ratings of teachers and principals paid from State Eight Months School Fund; those paid from local funds are not included. Since only 8 increments are allowed on Class A certificates, 6 on Class B, etc., the experience shown is not the actual number of years taught but the number for which the State makes compensation. For total experience claimed, see Vol. XII, No. 3 of *State School Facts*.

TABLE XVI. INSTRUCTIONAL AND SUPERVISORY PERSONNEL

This table gives for each unit of the State during 1937-1938 a distribution of instructional personnel by race and function. Teachers are also divided according to sex.

The summary shows for North Carolina the number of teachers in elementary schools, the number in high schools, the number of vocational teachers, the number of principals and supervisors, the number of clerical assistants; then relates the number of teachers to number of pupils in Table I. Average daily membership and average daily attendance are both used as measures of the teaching load. Fractions appear because of teachers doing work in both elementary and high schools.

TABLE XVIII. SCHOOLHOUSES AND SCHOOL PROPERTY

This table shows by race for each county and city unit of the State during 1937-1938: the value of school property, the number of schoolhouses owned, the average value of each schoolhouse, the number of classrooms and the average number of classrooms per school. With races combined, the value of school property, total number of schoolhouses and their average value are also given for each unit.

The summary gives various items of valuation for all school systems and relates these figures to number of schoolhouses, classrooms, teachers and pupils.

SUMMARY OF TABLE XVIII

ITEMS	100 Counties	69 Cities	North Carolina
Value of all school property.....	\$ 62,472,516	\$ 51,207,128	\$113,679,644
Sites and buildings.....	55,299,515	46,327,453	101,626,968

TABLE XIX. NUMBER OF SCHOOL UNITS TAUGHT—BY SIZE

This table shows by race for each county and city system of the State during 1937-1938: the number of elementary and high school units taught, classified according to number of teachers employed, and the number of union schools. The union school includes both elementary and secondary school units.

The summary gives the North Carolina total for each race with division between counties and cities. The number of separate elementary and separate high schools, as distinguished from the union schools, also appears.

SUMMARY OF TABLE XIX

ITEMS	100 Counties	69 Cities	North Carolina
WHITE SCHOOL UNITS TAUGHT.....	2,276	351	2,627
Elementary schools.....	1,626	258	1,884
One teacher.....	325	6	331
Two-three teachers.....	364	15	379

TABLE XX. STANDARDIZATION OF SCHOOLS

This summary shows by race for all elementary and high schools of the State during 1937-1938: the total number of schools taught, the number large enough to be standardized, the number of standard schools, the relationship between these items, total enrollment (a+d+e) in all units, enrollment (a+d+e) in standard schools and the percentage of children having opportunity to attend accredited schools.

ITEMS	100 Counties	69 Cities	North Carolina
WHITE SCHOOLS			
Elementary—			
Total number taught.....	1,626	258	1,884
Possible standard—7 or more teachers.....	644	211	855
Percentage large enough to become standard.....	39.6	81.8	45.4
Number standard schools.....	390	188	578
Percentage of total schools standardized.....	24.0	72.9	30.7
Percentage of larger schools standardized.....	60.5	89.1	67.6
Total enrollment (a+d+e).....	362,290	117,561	479,851
Enrollment in standard schools.....	169,318	99,364	268,682
Percentage in standard schools.....	46.7	84.5	56.0
High—			
Total number taught.....	650	93	743
Possible standard—3 or more teachers.....	614	91	705
Percentage large enough to become standard.....	94.5	97.8	96.2
Number standard schools.....	614	91	705
Percentage of total schools standardized.....	94.5	97.8	96.2
Percentage of larger schools standardized.....	100.0	100.0	100.0
Total enrollment (a+d+e).....	101,933	48,102	150,035
Enrollment in standard schools.....	99,967	47,989	147,956
Percentage in standard schools.....	98.1	99.8	98.6
COLORED SCHOOLS			
Elementary—			
Total number taught.....	1,969	204	2,173
Possible standard—7 or more teachers.....	63	88	151
Percentage large enough to become standard.....	3.2	43.1	6.9
Number standard schools.....	4	23	27
Percentage of total schools standardized.....	.2	11.3	1.2
Percentage of larger schools standardized.....	6.3	26.1	17.9
Total enrollment (a+d+e).....	176,762	60,447	237,209
Enrollment in standard schools.....	1,523	13,944	15,467
Percentage in standard schools.....	.9	23.1	6.5
High—			
Total number taught.....	142	61	203
Possible standard—3 or more teachers.....	100	53	153
Percentage large enough to become standard.....	70.4	86.9	75.4
Number standard schools.....	93	53	146
Percentage of total schools standardized.....	65.5	86.9	71.9
Percentage of larger schools standardized.....	93.0	100.0	95.4
Total enrollment (a+d+e).....	17,979	15,195	33,174
Enrollment in standard schools.....	15,280	14,613	29,893
Percentage in standard schools.....	85.0	96.2	90.1

TABLE XXI. DISTRICTS, BUILDINGS OWNED AND UNITS TAUGHT
IN COUNTY SYSTEMS

This table shows for each county (rural) system of the State during 1937-1938: the number of administrative or supervisory districts, the number of districts levying tax for bonds, the number of buildings owned and the number of school units taught.

COUNTIES	Number Administrative Districts		Number Bond-tax Districts	Number of Buildings Owned		Number of School Units Taught			
	White	Colored		White	Colored	White		Colored	
						Elem.	High	Elem.	High
Alamance	10	9		17	28	15	10	29	3

TABLE XXII. COMPARISON OF RURAL ELEMENTARY SCHOOLS

Section A of this tabulation—a summary of several tables—groups by size and race the rural elementary schools of the State during 1937-1938 to show the relative attainments of each group as to attendance and work accomplished. Section B groups the rural elementary schools according to length of term to compare relative attainments.

SECTION A. COMPARISON ACCORDING TO NUMBER OF TEACHERS

SIZE OF SCHOOLS	Items of Comparison												Teaching Load (ADA)	
	Number of Schools	Enrollment (a+d+e)	Proportion of Total	Average Daily Membership	Average Daily Attendance	Percentage of Attendance	Pupils Doing Full Year's Work	Pupils Doing Half Year's Work	Pupils Doing Less Than Half Year	Membership (Last Day of School)	Index of Accomplishment	Number of Teachers		Teaching Load (ADM)

TABLE XXIII. TRANSPORTATION OF PUPILS

This table gives information for those units—mostly counties—which transported children to and from school during 1937-1938. The transportation to city units which was paid for by the counties is shown here as rural except where term exceeded 160 days.

Units	White								Colored

TABLE XXIV. SCHOOL LIBRARIES

This summary gives by race for the combined county and city systems of the State during 1937-1938: the number of libraries in elementary and high schools; the total number of libraries; the number of volumes in these libraries; their estimated value; the amount expended for library maintenance (current expense) and for purchase of new books (capital outlay). At bottom of page is a comparison of the number of books in school libraries during the past ten years.

ITEMS	100 Counties	69 Cities	North Carolina

1935-1936.....	1,168,049	571,174	1,739,223
1936-1937.....	1,254,545	643,824	1,898,369
1937-1938.....	1,337,104	648,880	1,985,984

* The apparent decrease for cities is due to change of territory for administrative purposes. In 1932-1933 there were 93 cities and towns operating as units of administration; in 1933-1934 these were reduced to 67, the 26 smaller towns being transferred to county systems. For 1936-1937 and 1937-1938 the number of city administrative units was 69.

TABLE XXV. FREE BASAL TEXTBOOKS FOR ELEMENTARY SCHOOLS

This table shows a record of the first year's operation, 1937-1938, of the free textbook system, which applied only to basal textbooks for use in the elementary grades. This information was compiled from the final reports of the superintendents.

TABLE VII. EXPENDITURES FOR GENERAL CONTROL

This summary shows administrative costs (except State) for all public elementary and secondary schools of North Carolina during 1937-1938 and reduces to an average annual basis the amounts paid superintendents and their clerical assistants.

Average salaries were determined by a division of the amounts paid (codes 611, 613 and 627-1) by the number of people employed, as shown on Table XVI of Section I.

A separation of administrative costs between white and colored schools—also shown—was made by pro-rating enrollment (a+d+e) in the several units.

Expenditures for State administration—not given here—are set forth in Table XVI of Section III.

ITEMS	Code	100 Counties	69 Cities	North Carolina
EXPENDITURES				
Salaries of superintendents.....	611	\$ 263,156.80	\$ 187,699.91	\$ 450,856.71
Travel of superintendents.....	612	42,638.58	15,614.38	58,252.96
Salaries of clerical assistants*.....	613	135,346.52	76,305.78	211,652.30
Office expense.....	614	36,220.99	20,955.52	57,176.51
Total—Superintendents' offices.....		\$ 477,362.89	\$ 300,575.59	\$ 777,938.48
Boards of education—per diem, travel.....	615	27,854.71	578.29	28,433.00
Treasurers—Salaries, commissions, surety bonds.....	616	4,652.39	7,286.57	11,938.96
Attendance officers—salaries.....	617-1	2,200.00	6,530.00	8,730.00
Attendance officers—travel.....	617-2	1,515.00	1,174.28	2,689.28
Audits.....	618-1	13,813.52	6,108.57	19,922.09
Attorneys, elections.....	618-2	5,916.77	5,063.53	10,980.30
Total—General Control.....	61	\$ 533,315.28	\$ 327,316.83	\$ 860,632.11
White.....	61	376,923.21	227,712.55	604,635.76
Colored.....	61	156,392.07	99,604.28	255,996.35
AVERAGE ANNUAL SALARIES				
Superintendents.....		\$ 2,647.45	\$ 2,818.32	\$ 2,716.00
Clerical Assistants*.....		1,002.19	765.05	884.93

*Salaries of clerical assistants in principals' offices are coded 627-1; see Tables VIII and IX. These salaries were added to those above (613) in determining the averages.

TABLES VIII AND IX. EXPENDITURES FOR INSTRUCTIONAL SERVICE

These two tables give by race for each county and city school system of the State during 1937-1938: the salaries paid teachers in elementary schools, salaries paid teachers in high schools, salaries paid principals and supervisors, the cost of supplies, of textbooks (free to pupils) in elementary schools, of vocational education and of all other items of instructional service. Table VIII is devoted to the cost of instruction in elementary schools. Table IX gives information as to instructional costs in secondary schools.

The summary of the two tables shows by race the average annual salaries paid teachers and principals. The procedure was division of salary costs, as set forth in these tables, by the personnel employed, as shown in Table XVI of Section I. Since the cost of vocational education is coded separately (626), all vocational teachers were deducted from the total of Table XVI before computing the averages. Expenditures for vocational education (626) are reduced to a per-teacher basis—denominated average cost, which includes salaries and all other items of expense in this field.

North Carolina Unweighted Average.....	.074	.077	.221	.372	.89	1.262	29.5
Weighted Average*.....	.059	.068	.193	.32	.667	.987	32.4

*The unweighted average is the sum of tax-rates divided by 100, the number of counties. The weighted average takes assessed valuations into consideration and reduces the actual yields to one rate which if levied uniformly over the State would produce the same amount. The difference between the two proportions for schools, according to these two methods of calculation, is hardly large enough to be significant.

TABLE XVII. PROPORTION OF COUNTY TAX RATES FOR SCHOOLS

This table shows by counties for a six year period—1932 to 1938—the proportion of taxes levied which went to support schools. The double lines divide the years into legislative bienniums. For 1931-1933 there was a \$.15 State levy for schools.

The summary gives an unweighted average of all taxes levied during the above years for schools, for other purposes and the unweighted proportion which went to schools. Calculations have shown that the difference between a weighted and the unweighted percentage for schools is not large enough to be significant.

SUMMARY OF TABLE XVII

YEARS	Tax Rate for Schools	Other Than Schools	Total Rate	Percentage for Schools
1932-1933	\$.414	\$.669	\$1.083	38.2
1933-1934	.265	.834	1.099	24.1
1934-1935	.298	.804	1.102	27.0

TABLE XVIII. CITY TAX RATES

This table shows for 69 cities of the State—those operating as school administrative units, arranged alphabetically by counties—the tax rates levied during 1937-1938 for schools, for purposes other than schools and for all purposes; then gives the proportion which went for schools. Taxes levied by the counties (see Table XVI) are additional.

CITIES	For Schools				Other Than Schools	Total Rate	Percentage for Schools
